MercedCERA RETIREMENT BOARD AGENDA THURSDAY, SEPTEMBER 22, 2022 – 8:15 A.M. MERCED COUNTY EMPLOYEES' RETIREMENT ASSOCIATION

MERCED COUNTY ADMINISTRATION BUILDING 2222 M STREET, MERCED LOS BANOS AND LIVINGSTON CONFERENCE ROOMS, BASEMENT ZOOM CONFERENCE

https://us06web.zoom.us/j/93030195748?pwd=NGhFeGltSVhaSTlsK2JGWE83TVFydz09

DIAL IN NUMBER: 669-900-6833, MEETING ID: 930 3019 5748, PASSCODE: 095484 (FOR USE ONLY IF ZOOM CONNECTION MALFUNCTIONS) TELEPHONE NUMBER: 1-310-372-7549, CONFERENCE CODE: 975839

CALL TO ORDER - 8:15 A.M.

Important Notice Regarding SARS-COV-2

In order to minimize the spread of COVID-19, the Board of Retirement is meeting at the County of Merced Administration Building conference center to provide for sufficient social distancing for the Board and members of the public. Additionally, members of the MercedCERA Board as well as members of the public may elect to participate in this meeting offsite via conference call. Members of the public may attend the meeting in person or listen to the meeting and offer public comment telephonically by calling into the telephone number provided above and entering the stated conference code. If you have any issues participating in the meeting telephonically or require reasonable accommodation for your participation, please contact MercedCERA staff at 209-726-2724. Please turn your cell phone or other electronic device to non-audible mode.

ROLL CALL

APPROVAL OF MINUTES – September 8, 2022

PUBLIC COMMENT

Members of the public may comment on any item under the Board's jurisdiction including items on the Board's agenda. Matters presented under this item will not be discussed or acted upon by the Board at this time. Persons addressing the Board will be limited to a maximum of five (5) minutes in total. Please state your name for the record.

CONSENT ITEMS

Consent matters are expected to be routine and may be acted upon, without discussion, as one unit. If an item is taken off the Consent Calendar for discussion, it will be heard as the last item(s) of the Board Action/Discussion as appropriate.

Rebalancing Transactions:

Buy	Sell	Fund Name	Comments
	\$40m	Vanguard Bond	Completed
		Index	
\$40m		Vanguard Short Term	Completed
		Treasury Index	

CLOSED SESSION

As provided in the Ralph M. Brown Act, Government Code sections 54950 et seq., the Board may meet in closed session with members of its staff, county employees and its attorneys. These sessions are not open to the public and may not be attended by members of the public. The matters the Board will meet on in closed session are identified below. Any public reports of action taken in the closed session will be made in accordance with Government Code sections 54957.1.

(1) DISCUSSION AND POSSIBLE ACTION REGARDING INVESTMENTS IN RECOMMENDED FUNDS, ROLL CALL VOTE REQUIRED.

(Govt. Code § 54956.81)

1. Two Funds.

RETURN TO OPEN SESSION

Report on any action taken in closed session.

BOARD ACTION/DISCUSSION

- 1. Discussion and possible action on the final plans and estimated budget of the MercedCERA Headquarter Building Project Staff and Golden Valley Engineering.
- 2. Discussion and possible action on monthly portfolio performance with possible action on any manager and or funds Meketa.
- 3. Discussion and possible action to adopt recommendation from the Investment Subcommittee to replace Barrow Hanley and associated allocation Meketa.
- 4. Discussion and possible action on quarterly performance from Cliffwater on alternative portfolio with possible action on any managers and or funds Jamie Feidler, Cliffwater LLC.
- 5. Discussion on Government Code Section 7514.7 Alternate Fee Reporting for MercedCERA Jamie Feidler, Cliffwater.
- 6. Chair to appoint additional Trustee on the ad hoc CIO recruitment Committee Chair.
- 7. Review calendar of any training sessions and authorize expenditures for Trustees and Plan Administrator. Pursuant to Govt. Code § 31522.8 and MercedCERA's Trustees Education and Training Policy requirements. Examples of upcoming training and educational sessions:
 - Nossaman Forum, October 17-18, Los Angeles, CA.
 - SACRS Fall Conference, November 8 11, 2022, Long Beach, CA.
 - CALAPRS General Assembly, March 4 7, 2023 Monterey, CA (registration not currently open).

INFORMATION ONLY

MercedCERA UPCOMING BOARD MEETINGS

Please note: The MercedCERA Board Meeting and/or Education Day times and dates may be changed in accordance with the Ralph M. Brown Act by the MercedCERA Board as required.

- October 13, 2022
- October 27, 2022

ADJOURNMENT

The Agenda and supporting documentation, including any material that was submitted to the Merced County Employees' Retirement Association Board after the distribution of the Agenda, are available online at www.co.merced.ca.us/retirement.

All supporting documentation for Agenda items, including any material that was submitted to the retirement board after the distribution of the Agenda, is also available for public inspection Monday through Friday from 8:00 a.m. to 5:00 p.m. at the administrative office for the Merced County Employees' Retirement Association located at 3199 M Street, Merced, California 95348.

Persons who require accommodation for a disability in order to review an agenda, or to participate in a meeting of the Merced County Employees' Retirement Association per the American Disabilities Act (ADA), may obtain assistance by requesting such accommodation in writing addressed to Merced County Employees' Association, 3199 M Street, Merced, CA 95348 or telephonically by calling (209) 726-2724. Any such request for accommodation should be made at least 48 hours prior to the scheduled meeting for which assistance is requested.

Persons who require accommodation for any audio, visual or other disability or Spanish or Hmong interpretation in order to review an agenda, or to participate in a meeting of the Merced County Employees' Retirement Association per the American Disabilities Act (ADA), may obtain assistance by requesting such accommodation. Please address your written request to Merced County Employees' Association, 3199 M Street, Merced, CA 95348 or telephonically by calling (209) 726-2724. Any such request for accommodation should be made at least 48 hours prior to the scheduled meeting for which assistance is requested.

Spanish and Hmong interpreters are available.

CALL TO ORDER - 8:15 A.M.

ROLL CALL

Board Members Present: Ryan Paskin, Alfonse Peterson, Scott Silveira, Scott Johnston, Mike Harris, Aaron Rosenberg, Janey Cabral (arrived at 8:220AM) and Karen Adams. **Absent:** David Ness. **Counsel:** Jeff Grant. **Staff:** Kristen Santos, Brenda Mojica, Monica Gallegos, Mark Harman, Kenter Ludlow and Wendy Calderon.

APPROVAL OF MINUTES – August 11, 2022

The MercedCERA Board voted unanimously via roll call vote to approve the August 11, 2022 meeting minutes with the correction to reflect that during roll call, all trustees were present at the meeting.

Adams/Harris U/A (7/0)

PUBLIC COMMENT

No comment.

CONSENT CALENDAR

Consent matters are expected to be routine and may be acted upon, without discussion, as one unit. If an item is taken off the Consent Calendar for discussion, it will be heard as the last item(s) of the Board Action/Discussion as appropriate.

RETIREMENTS: Pursuant to Govt. Code § 31663.25 or § 31672

All items of earnable compensation for service or disability retirements listed below are in compliance with the pay code schedule approved by the Board of Retirement. The retirement is authorized; however, administrative adjustments may be necessary to alter the amount due to: audit, late arrival of data, court order, etc.

a.	Bass Jr., William	Sheriff-Corrections	14 Yrs. Svc.	Eff: 08/13/2022
b.	Munekawa, Robert	H.S.A.	1 Yrs. Svc.	Eff: 09/07/2022

g.	Winters, Richard	I.S.	17 Yrs. Svc	Eff: 09/05/2022

YTD fiscal year 2022/2023 retirees: 16

YTD fiscal year 2021/2022 retirees: 96 YTD fiscal year 2020/2021 retirees: 89

MONTHLY BUDGET REPORT: Delayed due to year end closing.

VIRTUAL MEETINGS: Reaffirm the adoption of Merced County Employee's Retirement Association Resolution No. 2021-02, and its findings that the Governor's proclaimed state of emergency related to the COVID-19 pandemic remains active, that the state of emergency impacts the ability of the Trustees and public to safely meet in person, and state or local officials continue to impose or recommend measures to promote social distancing.

The MercedCERA Board voted unanimously via roll call vote to approve the consent calendar as presented.

Silveira/Johnston U/A (7/0)

BOARD ACTION/DISCUSSION

1. Discussion and update on CPAS training project – Staff.

No action taken.

2. Discussion and possible action to appoint an ad hoc subcommittee to review MercedCERA bylaws – Chair.

The MercedCERA Board Chair appoints Trustee Cabral, Trustee Harris and Trustee Peterson to the ad hoc subcommittee to review MercedCERA bylaws.

- 3. Review calendar of any training sessions and authorize expenditures for Trustees and Plan Administrator. Pursuant to Govt. Code § 31522.8 and MercedCERA's Trustees Education and Training Policy requirements. Examples of upcoming training and educational sessions:
 - Nossaman Fiduciaries Forum, October 17 18, Los Angeles, CA.
 - SACRS Fall Conference, November 8 11, 2022, Long Beach, CA (registration not currently open).
 - CALAPRS General Assembly, March 4 7, 2023 Monterey, CA (registration not currently open)

The MercedCERA Board voted unanimously via roll call vote to approve the attendance of the Plan Administrator to the Nossaman Fiduciaries Forum.

Silveira/Adams U/A (7/0)

INFORMATION ONLY

Rosenberg- Tiburon class was amazing, thanks Kristie and Paskin for presentation.

Harris- Tiburon class was a very good class.

Kristie- Next meeting Golden Valley will come in with an update for the MercedCERA Board.

MercedCERA UPCOMING BOARD MEETINGS

Please note: The MercedCERA Board Meeting and/or Education Day times and dates may be changed in accordance with the Ralph M. Brown Act by the MercedCERA Board as required.

- September 22, 2022
- October 13, 2022

SHEET NUMBER:

IMPROVEMENT NOTES:

TO VERIFY THE LOCATION OF UTILITIES.

SHALL BE DONE IN ACCORDANCE WITH:

- IMPROVEMENTS SHALL BE DONE IN ACCORDANCE WITH CITY OF MERCED STANDARD DETAILS AND SPECIFICATIONS.
- 2. ELEVATIONS ARE 170.02'. BASIS OF ELEVATION IS CITY OF MERCED DISK ON TOP OF NORTHWEST CORNER OF CONCRETE PLANTER WALL THAT IS WEST OF THE SOUTH CURB RETURN, SOUTH WEST CORNER OF 'M' STREET AND WEST 18TH STREET.
- 3. THE SITE IS LOCATED IN FLOOD ZONE AO (DEPTH 1 FEET) PER F.I.R.M. BASE FLOOD MAP 06047C0440G EFFECTIVE DATE 12/2/2008, PREPARED BY F.E.M.A.
- CONTRACTOR AGREES THAT HE SHALL ASSUME SOLE AND COMPLETE RESPONSIBILITY FOR JOB SITE CONDITIONS DURING THE COURSE OF CONSTRUCTION OF THIS PROJECT, INCLUDING SAFETY OF ALL PERSONS AND PROPERTY; THAT THIS REQUIREMENT SHALL APPLY CONTINUOUSLY AND NOT BE LIMITED TO NORMAL WORKING HOURS; AND THAT THE CONTRACTOR SHALL DEFEND, INDEMNIFY AND HOLD THE OWNER, THE ENGINEER AND THE CITY/COUNTY OF MERCED HARMLESS FROM ANY AND ALL LIABILITY, REAL OR ALLEGED, IN CONNECTION WITH THE PERFORMANCE OF WORK ON THIS PROJECT, EXCEPTING FOR LIABILITY ARISING FROM THE SOLE NEGLIGENCE OF THE OWNER, THE ENGINEER OR THE CITY OF MERCED.
- 5. A REASONABLE EFFORT HAS BEEN MADE TO LOCATE AND DELINEATE ALL UNDERGROUND UTILITIES AND OBSTRUCTIONS THROUGH TOPOGRAPHIC INFORMATION PROVIDED BY GOLDEN VALLEY ENGINEERING & SURVEYING INC. AND THROUGH INFORMATION SHOWN ON PUBLIC IMPROVEMENT PLANS OF THE AREA. GOLDEN VALLEY ENGINEERING & SURVEYING INC., CIVIL ENGINEERS, CAN ASSUME NO RESPONSIBILITY FOR THE COMPLETENESS OF THIS EFFORT OR FOR THE EXISTENCE OF OTHER BURIED OBJECTS OR UTILITIES WHICH MAY BE ENCOUNTERED BUT WHICH ARE NOT SHOWN ON THESE DRAWINGS. IT IS THE CONTRACTOR'S RESPONSIBILITY
- CONTRACTOR SHALL LOCATE AND PRESERVE ALL FACILITIES INCLUDING GAS, WATER, IRRIGATION, SEWER. POWER. STREET LIGHTS. TELEPHONE AND OTHERS WHICH MAY BE IN THE AREA OF CONSTRUCTION. CONTRACTOR SHALL NOTIFY ALL UTILITIES CONCERNED PRIOR TO COMMENCEMENT OF WORK BY CALLING (811) UNDERGROUND SERVICE ALERT. ENGINEER SHALL BE NOTIFIED OF ANY GROSS LOCATION OR DEPTH DISCREPANCIES.
- 7. CONTRACTOR IS RESPONSIBLE FOR COORDINATION OF THE REMOVAL OR RELOCATION OF ALL EXISTING UTILITIES WITH THE RESPECTIVE UTILITY COMPANY. COST OF THIS COORDINATION IS TO BE INCLUDED IN THE PRICES BID FOR THE VARIOUS IMPROVEMENTS TO COMPLETE THE
- 8. ALL WORK RELATED TO THE GRADING, DRAINAGE AND PAVING DEPICTED ON THESE PLANS

A.) SOILS REPORT AND ALL ADDENDUMS PERFORMED BY KRAZAN & ASSOCIATES, INC. ON OCTOBER 7, 2019. KA PROJECT NO. 012-19164. ADDRESS: 215 WEST DAKOTA AVENUE, CLOVIS, CALIFORNIA 93612.

B.) APPENDIX J AND CHAPTER 33 OF THE 2019 CALIFORNIA BUILDING CODE.

C.) THE APPLICABLE SECTIONS OF THE STANDARD SPECIFICATIONS OF THE LOCAL AGENCY.

- 9. SURPLUS MATERIAL (INCLUDING SOIL, ASPHALT, CONCRETE OR ANY OTHER MATERIAL ENCOUNTERED DURING CONSTRUCTION) SHALL BECOME THE PROPERTY OF THE CONTRACTOR AND SHALL BE DISPOSED OF OUTSIDE THE PROJECT BOUNDARIES AT AN APPROPRIATE LOCATION IN CONFORMANCE WITH SECTION 19-2.03B OF THE 2018 CALTRANS STANDARD SPECIFICATIONS. FULL COMPENSATION FOR SAID WORK SHALL BE INCLUDED IN THE EARTHWORK BID ITEM OF THE CONSTRUCTION CONTRACT UNLESS OTHERWISE SPECIFICALLY ITEMIZED IN THE BID SHEET/QUANTITY LIST FOR THE PROJECT CONSTRUCTION CONTRACT.
- GRADES SHOWN ON THE PLAN ARE FINISHED GRADES UNLESS OTHERWISE SPECIFICALLY NOTED. IT WILL BE THE CONTRACTOR'S RESPONSIBILITY TO DETERMINE FINISHED SURFACE ELEVATIONS OF BASE COURSES, SUBGRADES, ETC.
- 11. THE CONTRACTOR SHALL PRESERVE ALL STAKES AND POINTS SET FOR LINES, GRADES, OR MEASUREMENT OF THE WORK IN THEIR PROPER PLACES UNTIL AUTHORIZED TO REMOVE THEM BY THE ENGINEER. ALL EXPENSES INCURRED IN REPLACING STAKES THAT HAVE BEEN REMOVED WITHOUT PROPER AUTHORITY SHALL BE PAID FOR BY THE CONTRACTOR AND MAY BE DEDUCTED FROM PAYMENTS DUE THE CONTRACTOR.
- 12. <u>LINES AND GRADES</u>: ALL DISTANCES AND MEASUREMENTS ARE GIVEN AND WILL BE MADE IN A HORIZONTAL PLANE. GRADES ARE GIVEN FROM THE TOP OF STAKES OR NAILS UNLESS OTHERWISE NOTED. THE CONTRACTOR SHALL USE THREE POINTS OF REFERENCE TO DETERMINE ANY GRADIENT OR SLOPE. THE CONTRACTOR SHALL NOTIFY THE ENGINEER OF ANY DISCREPANCIES IN GRADIENT OR SLOPE PRIOR TO BEGINNING ANY CONSTRUCTION.
- 13. IT IS RECOMMENDED THAT A SOILS ENGINEER BE RETAINED FOR THE PROJECT.
- 14. IN THE EVENT THAT RAIN OCCURS OR IS LIKELY TO OCCUR, THE EXPOSED SURFACES SHALL BE TREATED AS DIRECTED BY THE SOILS ENGINEER PRIOR TO THE COMPLETION OF THAT DAY'S WORK AND BEFORE DAMAGE HAS OCCURRED.

- 15. THE DISPOSITION OF ALL FENCES, BRUSH, CULVERTS AND ANY OTHER MATERIAL UNUSUAL FOR GRADING AND UNDERGROUND OBSTACLES SUCH AS WELLS, TANKS, IRRIGATION LINES SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR AS DIRECTED BY THE ENGINEER IN ACCORDANCE WITH ANY LOCAL AGENCY REQUIREMENTS.
- 16. COMPACTION TESTS MAY BE REQUIRED BY THE LOCAL AGENCY ARE THE RESPONSIBILITY OF THE CONTRACTOR.
- 17. DUST CONTROL: APPROPRIATE DUST CONTROL SHALL BE PROVIDED FOR THE ALLEVIATION OR PREVENTION OF DUST NUISANCE, AT THE CONTRACTOR'S EXPENSE.
- 18. WHERE THE PLANS OR SPECIFICATIONS DESCRIBE PORTIONS OF THE WORK IN GENERAL TERMS BUT NOT IN COMPLETE DETAIL, IT IS UNDERSTOOD THAT ONLY THE BEST GENERAL PRACTICE IS TO PREVAIL AND THAT ONLY MATERIALS AND WORKMANSHIP OF THE FINEST QUALITY ARE TO
- 19. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO NOTIFY THE CITY OF MERCED BUILDING DIVISION AT LEAST ONE WORKING DAY IN ADVANCE OF BEGINNING ANY NEW PHASE OF WORK IN ORDER TO SCHEDULE ANY NECESSARY OR REQUIRED INSPECTIONS.
- 20. P.G.&E., M.I.D., TELEPHONE AND CABLE T.V. FACILITIES TO BE INSTALLED BY THE RESPECTIVE UTILITY COMPANIES AND ARE TO OCCUPY A JOINT TRENCH.
- 21. ALL WORK SHALL BE DONE IN ACCORDANCE WITH THE CALIFORNIA ADMINISTRATIVE CODE, TITLE 8 SUBCHAPTER 4, CONSTRUCTION SAFETY ORDERS.
- 22. THE CONTRACTOR SHALL COMPLY WITH THE REQUIREMENTS OF CHAPTER 9, SECTION 6705, 6706 AND 6707 OF THE STATE LABOR CODE.
- 23. THE FIRM OF GOLDEN VALLEY ENGINEERING & SURVEYING INC. ASSUMES NO RESPONSIBILITY BEYOND THE ADEQUACY OF ITS DESIGN CONTAINED HEREIN.
- 24. IT IS RECOMMENDED THAT GOLDEN VALLEY ENGINEERING & SURVEYING INC. BE RETAINED TO PERFORM INSPECTIONS DURING THE CONSTRUCTION PHASES OF THE WORK. G.V.E.S., INC. ASSUMES NO RESPONSIBILITY FOR COMPLIANCE WITH THESE IMPROVEMENT PLANS UNLESS THEY HAVE BEEN RETAINED TO PERFORM INSPECTIONS DURING THE CONSTRUCTION PHASES OF THE WORK AND HAVE AGREED IN WRITING TO ACCEPT SAID RESPONSIBILITY.
- 25. THE CONTRACTOR SHALL BE RESPONSIBLE FOR SCHEDULING ALL INSPECTION WITH LOCAL GOVERNING AGENCIES.
- 26. ALL WORK AND MATERIALS SHALL BE DONE IN COMPLIANCE WITH LOCAL ORDINANCES AND THE 2019 EDITION OF THE CALIFORNIA BUILDING CODE, CALIFORNIA PLUMBING CODE, CALIFORNIA FIRE CODE AND THE 2019 CALIFORNIA ELECTRICAL CODE.
- 27. NO WORK SHALL COMMENCE UNTIL ALL APPLICABLE PERMITS ARE OBTAINED FROM THE LOCAL GOVERNING AGENCY.
- 28. CONSTRUCTION AND MATERIALS FOR ASPHALTIC CONCRETE PAVING SHALL BE IN ACCORDANCE WITH SECTION 39, "ASPHALT CONCRETE" OF THE STATE STANDARD SPECIFICATION, TYPE "B", 1/2" MAXIMUM. MEDIUM GRADED AGGREGATE.
- 29. CONSTRUCTION AND MATERIALS FOR AGGREGATE BASE SHALL IN ACCORDANCE WITH SECTION 26. "AGGREGATE BASES" OF THE STATE STANDARD SPECIFICATION, CLASS 2. WITH 3/4" MAXIMUM
- FACILITIES PRIOR TO ANY CONSTRUCTION INCLUDING ORDERING MATERIALS. IF OTHER THAN SHOWN ON DRAWINGS, NOTIFY ENGINEERS IMMEDIATELY.
- 31. CITY OF MERCED STANDARDS ARE PART OF THIS PLAN. CHECK WITH CITY FOR LATEST EDITION OF STANDARDS.
- 32. ALL COMPACTION IN CITY RIGHT OF WAY ARE PER CURRENT CITY REQUIREMENTS AND SHALL SUPERCEDE OUTDATED STANDARDS. SEE CITY'S ENGINEERING DEPARTMENT FOR REQUIREMENTS.

SEPARATE PERMIT IS REQUIRED FOR BUILDING DEMOLITION.

- 2. SEE SOIL REPORT FOR ADDITIONAL DEMOLITION REQUIREMENTS AND SITE PREPARATION.
- 3. PROTECT EXISTING UTILITIES DURING DEMOLITION.
- THE CONTRACTOR SHALL COORDINATE RELOCATION/UNDERGROUND OF OVERHEAD DRY UTILITIES WITH THE RESPECTIVE UTILITY COMPANY
- NO WORK WITHIN THE PUBLIC RIGHT-OF-WAY SHALL START UNTIL AN ENCROACHMENT PERMIT IS OBTAINED FROM THE COMMUNITY DEVELOPMENT DEPARTMENT.

DEMOLITION LEGEND:

TO BE DEMOLISHED

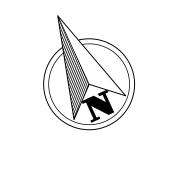

---- ASPHALT SAWCUT NEW DEVELOPMENT

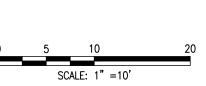

AREA TO BE DEMOLISHED

CAUTION:

- CONTRACTOR TO LOCATE ALL UNDERGROUND UTILITIES (WATER, GAS, ELECTRICAL, TV, COMMUNICATION, & ETC.) PRIOR TO START OF CONSTRUCTION & DEMOLITION.
- REPORT ANY DISCREPANCIES TO ENGINEER OF RECORD.

SITE KEYNOTES:

- PROPOSED BUILDING, SEE ARCHITECTURAL BUILDING PLANS.
- 2 CONCRETE PAMING PER PAVEMENT LEGEND ON THIS SHEET.
- 3 ASPHALT PATCHBACK PER DETAIL A ON SHEET C8.0.
- NEW SIDEWALK PER CITY STANDARD DETAIL SCG-2 AS SHOWN ON SHEET C9.0. SHALL HAVE A MAX CROSS SLOPE OF 2% AND SHALL NOT $\overline{\text{EXCEED}}$ 5.0% SLOPE IN DIRECTION OF TRAVEL.
- 5 NEW TO EXISTING SIDEWALK PER DETAIL A ON SHEET C8.1.
- 6 COMMERCIAL DRIVEWAY APPROACH WITH CITY STANDARD CROSS DETAIL D-7 AS SHOWN ON C9.0.
- ADA CURB RAMP WITH MAX. 1.5% CROSS SLOPE & MAX. 8.33% RUNNING SLOPE.(SEE DETAIL C ON SHEET C8.0 FOR ADA RAMP.) SEE GRADING PLAN AS SHOWN ON SHEET C7.0.
- 8 36" DEEP TRUNCATED DOME MAT SAME WIDTH AS THE SIDEWALK PER DETAIL B AS SHOWN ON SHEET C9.0.
- 9 NEW CURB & GUTTER PER CITY STANDARD DETAIL SCG-1 AS SHOWN ON SHEET C9.0.
- 10 NEW TO EXISTING CURB TO GUTTER PER DETAIL G ON SHEET C8.0.
- 6" VERTICAL CURB AT SIDEWALK PER DETAIL D AS SHOWN ON SHEET C8.0.
- 6" VERTICAL CURB AT LANDSCAPING PER DETAIL E AS SHOWN ON SHEET C8.0.
- 24" CURB TAPER PER DETAIL L AS SHOWN ON SHEET C8.0.
- 15) RAMP HANDRAIL PER ARCHITECTURAL BUILDING PLAN DETAIL.
- REFUSE CONCRETE LOADING PAD. 6" CLASS "A" CONCRETE WITH NO. 4 BARS AT 18" O.C. EACH WAY, OVER 6" CLASS II
- AB @ 95% R.C. OVER 12" NATIVE @ 90% R.C. PER CITY STANDARD DETAIL R-4 AS SHOWN ON SHEET C9.0.
- (18) CONCRETE PARKING BLOCKS (WHEEL STOP) PER DETAIL B ON SHEET C8.0.
- 19) PARKING STALL PER DETAIL N AS SHOWN ON SHEET C8.0.
- PARKING FOR CLEAN AIR VEHICLE TYPICAL OF 1.
- ELECTRIC VEHICLE CHARGING SPACE "EVCS". TYPICAL OF 1. W/FUTURE CHARGING STATIONS
- 22 COMPACT PARKING STALLS, TYPICAL OF 3.
- 23 2'-6" VEHICLE OVERHANG.
- 24) ADA PARKING STALL EMBLEM PER DETAIL 12 AS SHOWN ON SHEET ADA-1 ON
- 25) ACCESS AISLE STRIPPING, "NO PARKING" AND BLUE BORDER PER DETAIL 9 ON SHEET ADA-1.
- 4" WIDE PAVEMENT WHITE STRIPING (WITH NO PARKING)
- 4" WIDE STRIPING ON ACCESSIBLE ROUTE PER DETAIL 10 AS SHOWN ON SHEET ADA-1.
- 28) VAN ACCESSIBLE PARKING STALL PER DETAIL 10 AS SHOWN ON SHEET ADA-1.
- 29 VAN ACCESSIBLE PARKING SIGN PER DETAIL 13 ON SHEET ADA-1. MOUNTED ON THE WALL WITH BOTTOM OF SIGN 80" A.F.F. OR POLE MOUNTED PER DETAIL R AS SHOWN ON SHEET C8.1.
- 30 ACCESSIBLE PARKING ENTRANCE SIGN PER DETAIL 13 ON SHEET ADA-1.
- 4' WIDE ACCESSIBLE PATH OF TRAVEL. SHALL HAVE A MAX CROSS SLOPE OF 2% AND SHALL NOT EXCEED 5.0% SLOPE IN DIRECTION OF TRAVEL.
- 32) ACCESSIBLE PATH OF TRAVEL TO TRASH ENCLOSURE.
- 33 LANDSCAPING AREA PER LANDSCAPING PLAN
- 34 BICYCLE RACK.
- 35) 1" REDUCED PRESSURE BACKFLOW PREVENTER FOR LANDSCAPING INCLUDING ENCLOSURE AND CONCRETE PADS PER CITY STANDARD DETAIL W-9 AS SHOWN ON SHEET C9.1.
- 36) 1" WATER METER FOR LANDSCAPE PER CITY STANDARD DETAIL W-4 AS SHOWN ON SHEET C9.1. (MOUNTED ON RP
- 1" REDUCED PRESSURE BACKFLOW PREVENTER FOR DOMESTIC INCLUDING ENCLOSURE AND CONCRETE PADS PER CITY STANDARD DETAIL W-9 AS SHOWN ON SHEET C9.1.

GEOTECHNICAL ENGINEERING INVESTIGATION PROPOSED MERCED COUNTY EMPLOYEES' RETIREMENT BUILDING 19TH STREET AND 'N' STREET MERCED, CALIFORNIA

INTRODUCTION

This report presents the results of our Geotechnical Engineering Investigation for the proposed Merced County Employees' Retirement Building to be located at the southeast corner of 19th Street and 'N' Street in Merced, California. Discussions regarding site conditions are presented herein, together with conclusions and recommendations pertaining to site preparation, Engineered Fill, utility trench backfill, drainage and landscaping, foundations, concrete floor slabs and exterior flatwork, retaining walls, soil cement reactivity, and pavement design.

A site plan showing the approximate boring locations is presented following the text of this report. A description of the field investigation, boring logs, and the boring log legend are presented in Appendix A. Appendix A contains a description of the laboratory testing phase of this study; along with the laboratory test results. Appendices B and C contain guides to earthwork and pavement specifications. When conflicts in the text of the report occur with the general specifications in the appendices, the recommendations in the text of the report have precedence.

PURPOSE AND SCOPE

CONCLUSIONS AND RECOMMENDATIONS

Administrative Summary

This investigation was conducted to evaluate the soil and groundwater conditions at the site, to make geotechnical engineering recommendations for use in design of specific construction elements, and to provide criteria for site preparation and Engineered Fill construction.

Our scope of services was outlined in our proposal dated February 22, 2019 (KA Proposal No. P531-19) and included the following:

- · A site reconnaissance by a member of our engineering staff to evaluate the surface conditions at the project site.
- A field investigation consisting of drilling 2 borings to depths of approximately 15 and 50 feet for evaluation of the subsurface conditions at the project site.

Based on the findings of our field and laboratory investigations, along with previous geotechnical

experience in the project area, the following is a summary of our evaluations, conclusions, and

In brief, the subject site and soil conditions, with the exception of the loose surface soils, expansive

nature of the clayey soils, previous development and existing development, appear to be conducive to

have low strength characteristics, and are highly compressible when saturated. Accordingly, it is

recommended that these surface soils be recompacted. The compaction effort should stabilize the

Up to 3½ feet of fill material was encountered within the borings drilled throughout the site. The fill

material predominately consisted of gravelly silty sand, silty sand/clayey sand or silty sand with gravel.

The thickness and extent of fill material was determined based on limited test borings and visual

observation. Thicker fill may be present at the site. Limited testing was performed on the fill soils

during the time of our field and laboratory investigations. The limited testing indicates the fill soils had

varying strength characteristics ranging from loosely placed to compacted. Therefore, it is

recommended that fill soils that have not been properly compacted and certified be excavated and

stockpiled so that the native soils can be prepared properly. Over-excavation should extend to a

Fill provided it is cleansed of excessive organics, debris, and fragments larger than 4 inches in

Clayey soils were encountered within the site. These clayey soils appear to have a moderate

shrink/swell potential. The estimated swell pressure of the clavey material may cause movement

that the upper 24 inches of soil within slab-on-grade and exterior flatwork areas consist of non-

expansive fill. The fill material should be a well-graded silty sand or sandy silt soil. A clean sand or

very sandy soil is not acceptable for this purpose. A sandy soil will allow the surface water to drain into

the expansive clayey soils below, which may result in swelling. The replacement soil and/or the upper

24 inches of Imported Fill soils should meet the specifications as described under the subheading

non-expansive replacement soil should be compacted to at least 90 percent relative compaction based on

ASTM Test Method D1557. The exposed native soils in the excavation should not be allowed to dry

out and should be kept continuously moist prior to backfilling. In addition, it is recommended that slab-

on-grade continuous footings and slabs be nominally reinforced to reduce cracking and vertical off-set.

With Offices Serving The Western United States

The preferred materials specified for Engineered Fill are suitable for most applications with the

exception of exposure to erosion. Project site winterization and protection of exposed soils during the

construction phase should be the sole responsibility of the Contractor, since he has complete control of

Imported Fill should consist of a well-graded, slightly cohesive, fine silty sand or sandy silt, with

relatively impervious characteristics when compacted. This material should be approved by the Soils

UBC Standard 29-2 Expansion Index 15 maximum

Fill soils should be placed in lifts approximately 6 inches thick, moisture-conditioned to a minimum of 2

percent above optimum moisture content, and compacted to achieve at least 90 percent maximum

20 to 50

10 maximum

Preparation of this report summarizing the results, conclusions, recommendations, and findings

RA No. 012-19164

PROPOSED CONSTRUCTION

We understand that design of the proposed development is currently underway; structural load information and other final details pertaining to the structures are unavailable. On a preliminary basis, it is understood that the development will include construction of a commercial building. It is anticipated the building will be a single- or two-story structure utilizing concrete slab-on-grade. On-site paved areas and landscaping are also planned for the development of the project.

In the event, these structural or grading details are inconsistent with the final design criteria, the Soils Engineer should be notified so that we may update this writing as applicable.

SITE LOCATION, SITE HISTORY AND SITE DESCRIPTION

The site is rectangular in shape and encompasses approximately 0.41 acres. The site is located at the southeast corner of 19th Street and 'N' Street in Merced, California. A parking lot is located south of the site. The remainder of the site is predominately surrounded by commercial developments

Site history was obtained by reviewing historical aerial photographs taken in 1999, 2009, 2015 and 2016. Review of the 1999 aerial photograph indicates that the project site was occupied by a commercial building with associated grass and trees.

Review of the 2009 aerial photograph indicates that the project site predominately consisted of a vacant lot. The previous structure had been removed. Several trees had been planted along the northern and western edges of the site. A new commercial building had been constructed west of the site.

Review of the 2015 aerial photograph indicates that the project site conditions appeared to be relatively similar to that noted in the 2009 aerial photograph

Review of the 2016 aerial photograph indicates that the site was used as a construction equipment storage yard for a structure under construction south of the site.

Presently, the site predominately consists of a vacant lot. Buried utility lines are located along the edges of the site and extend into the site. The site is covered by a sparse to moderate weed growth and the surface soils have a loose consistency. Several small trees are located along the northern and western edges of the site. Several small bushes are located along the southern edge of the site. Buried utility lines are located along the edges of the site and may extend into the project site. The site is relatively level with no major changes in grade.

Page No. 7

GEOLOGIC SETTING

The San Joaquin Valley, which includes the Merced area, is a topographic and structural basin that is bounded on the east by the Sierra Nevada Mountains and on the west by the Coast Ranges. The Sierra Nevada, a fault block dipping gently southwestward, is made up of igneous and metamorphic rocks of pre-Tertiary age that comprise the basement complex beneath the Valley. The Coast Ranges contain folded and faulted sedimentary rocks of Mesozoic and Cenozoic age, which are similar to those rocks that underlie the Valley at depth and non-conformably overlie the basement complex; gently dipping to nearly horizontal sedimentary rocks of Tertiary and Quaternary age overlie the older rocks. These younger rocks are mostly of continental origin and in the Merced area, they were derived from the Sierra Nevada.

The Coast Ranges evolved as a result of folding, faulting, and accretion of diverse geologic terrains. They are composed chiefly of sedimentary and metamorphic rocks that are sharply deformed into complex structures. They are broken by numerous faults, the San Andreas Fault being the most notable structural feature.

Both the Sierra Nevada and Coast Range are geologically young mountain ranges and possess active and potentially active fault zones. Major active faults and fault zones occur at some distance to the east, west, and south of the Merced area. The Owens Valley Fault Zone bounds the eastern edge of the Sierra Nevada block and contains both active and potentially active faults.

There are no active fault traces in the project vicinity. Accordingly, the project area is not within an Earthquake Fault Zone (Special Studies Zone) and will not require a special site investigation by an Engineering Geologist.

Merced residents could feel the effects of a large seismic event on one of the nearby active or potentially active fault zones. Merced has experienced groundshaking from earthquakes in the historical past. According to the Five County Seismic Safety Element, groundshaking of VII intensity (Modified Mercali Scale) was felt in Merced from the 1872 Owens Valley Earthquake. This is the largest known earthquake event affecting the Merced area.

FIELD AND LABORATORY INVESTIGATIONS

Subsurface soil conditions were explored by drilling 2 borings to depths of approximately 15 and 50 feet below existing site grade, using a truck-mounted drill rig. In addition, 1 bulk subgrade sample was obtained from the site for laboratory R-value testing. The approximate boring and bulk sample locations are shown on the site plan. During drilling operations, penetration tests were performed at regular intervals to evaluate the soil consistency and to obtain information regarding the engineering properties of the subsoils. Soil samples were retained for laboratory testing. The soils encountered were continuously examined and visually classified in accordance with the Unified Soil Classification System. A more detailed description of the field investigation is presented in Appendix A.

> > KA No. 012-19164 Page No. 8

KA No. 012-19164

Groundwater Influence on Structures/Construction

Based on our findings and historical records, it is not anticipated that groundwater will rise within the zone of structural influence or affect the construction of foundations and payements for the project. However, if earthwork is performed during or soon after periods of precipitation, the subgrade soils may become saturated, pump, or not respond to densification techniques. Typical remedial measures include: discing and aerating the soil during dry weather; mixing the soil with dryer materials; removing and replacing the soil with an approved fill material; or mixing the soil with an approved lime or cement product. Our firm should be consulted prior to implementing remedial measures to observe the unstable subgrade conditions and provide appropriate recommendations.

General site clearing should include removal of vegetation; existing utilities; structures including foundations; existing stockpiled soil; trees and associated root systems; rubble; rubbish; and any loose and/or saturated materials. Site stripping should extend to a minimum depth of 2 to 4 inches, or until all organics in excess of 3 percent by volume are removed. Deeper stripping may be required in localized areas. These materials will not be suitable for use as Engineered Fill. However, stripped topsoil may be stockpiled and reused in landscape or non-structural areas.

Up to 3½ feet of fill material was encountered within the borings drilled throughout the site. The fill material predominately consisted of gravelly silty sand, silty sand/clayey sand and silty sand with gravel. The thickness and extent of fill material was determined based on limited test borings and visual observation. Thicker fill may be present at the site. Limited testing was performed on the fill soils during the time of our field and laboratory investigations. The limited testing indicates that the fill soils ranged from loosely placed to compacted. Therefore, it is recommended fill soils that have not been properly compacted and certified be excavated and stockpiled so that the native soils can be prepared properly. Over-excavation should extend to a minimum of 5 feet beyond structural elements. The fill material will be suitable for reuse as general Engineered Fill provided it is cleansed of excessive organics, debris, and fragments larger than 4 inches in maximum dimension. Prior to backfilling, Krazan & Associates, Inc., should inspect the bottom of the excavation to verify no additional removal

Tree and shrub removal operations should include roots greater than 1 inch in diameter. The resulting excavations should be cleaned to firm native ground and backfilled with Engineered Fill compacted to a minimum of 90 percent of maximum density based on ASTM Test Method D1557.

The site was previously occupied by a commercial development. In addition, existing developments are located within the project site vicinity. Associated with these developments are buried structures, such as utility lines and landscape irrigation lines that extend into the project site. Any surface or buried structures, including utilities, encountered during construction should be properly removed and the resulting excavations backfilled with Engineered Fill. It is suspected demolition activities of the existing structures will disturb the upper soils. Areas disturbed by demolition activities should be excavated to firm native ground. Excavations, depressions, or soft and pliant areas extending below

> Krazan & Associates, Inc With Offices Serving The Western United States

> > KA No. 012-19164

KA No. 012-19164

installed. It is recommended that the utility trenches within the structure be compacted, as specified in our report, to reduce the transmission of moisture through the utility trench backfill. Special attention to the immediate drainage and irrigation around the building is recommended. Positive drainage should be established away from the structure and should be maintained throughout the life of the structure. Ponding of water should not be allowed adjacent to the structure. Over-irrigation within landscaped areas adjacent to the structure should not be performed. In addition, ventilation of the structure (i.e.

ventilation fans) is recommended to reduce the accumulation of interior moisture.

Lateral Earth Pressures and Retaining Walls

Engineered Fill.

Walls retaining horizontal backfill and capable of deflecting a minimum of 0.1 percent of its height at the top may be designed using an equivalent fluid active pressure of 50 pounds per square foot per foot of depth. Walls incapable of this deflection of are fully constrained walls against deflection may be designed for an equivalent fluid at-rest pressure of 70 pounds per square foot per foot of depth, Expansive soils should not be used for backfill against walls. The wedge of non-expansive backfill material should extend from the bottom of each retaining wall outward and upward at a slope of 2:1 (horizontal to vertical) or flatter. The stated lateral earth pressures do not include the effects of hydrostatic water pressures generated by infiltrating surface water that may accumulate behind the retaining walls; or loads imposed by construction equipment, foundations, or roadways. All of the above earth pressures are unfactored and are, therefore, not inclusive of factors of safety.

During grading and backfilling operations adjacent to any walls, heavy equipment should not be allowed to operate within a lateral distance of 5 feet from the wall, or within a lateral distance equal to the wall height, whichever is greater, to avoid developing excessive lateral pressures. Within this zone, only hand-operated equipment ("whackers," vibratory plates, or pneumatic compactors) should be used

Retaining and/or below grade walls should be drained with either perforated pipe encased in freedraining gravel or a prefabricated drainage system. The gravel zone should have a minimum width of 12 inches wide and should extend upward to within 12 inches of the top of the wall. The upper 12 inches of backfill should consist of native soils, concrete, asphaltic concrete, or other suitable backfill to minimize surface drainage into the wall drain system. The aggregate should conform to Class 2 permeable materials graded in accordance with CalTrans Standard Specifications (2018). Prefabricated drainage systems, such as Miradrain®, Enkadrain®, or an equivalent substitute, are acceptable alternatives in lieu of gravel provided they are installed in accordance with the manufacturer's recommendations. If a prefabricated drainage system is proposed, our firm should review the system for final acceptance prior to installation.

Drainage pipes should be placed with perforations down and should discharge in a non-erosive manner away from foundations and other improvements. The pipes should be placed no higher than 6 inches above the heel of the wall, in the center line of the drainage blanket and should have a minimum diameter of four inches. Collector pipes may be either slotted or perforated. Slots should be no wider than 1/4 inch in diameter, while perforations should be no more than 1/4 inch in diameter. If retaining walls are less than 6 feet in height, the perforated pipe may be omitted in lieu of weep holes on 4 feet

KA No. 012-19164

It should be recognized that water table elevations may fluctuate with time, being dependent upon seasonal precipitation, irrigation, land use, and climatic conditions as well as other factors. Therefore, water level observations at the time of the field investigation may vary from those encountered during the construction phase of the project. The evaluation of such factors is beyond the scope of this report.

SOIL LIQUEFACTION

KA No. 012-19164

01219164 Report (MCE Retirement Building).doc

Laboratory tests were performed on selected soil samples to evaluate their physical characteristics and

engineering properties. The laboratory testing program was formulated with emphasis on the evaluation

of natural moisture, density, gradation, shear strength, consolidation potential, expansion potential

atterberg limits, R-value, and moisture-density relationships of the materials encountered. In addition,

chemical tests were performed to evaluate the soil-cement reactivity. Details of the laboratory test

program and results of the laboratory tests are summarized in Appendix A. This information, along

Based on our findings, the subsurface conditions encountered appear typical of those found in the

geologic region of the site. In general, the surface soils consisted of approximately 6 to 12 inches of

very loose gravelly silty sand. These soils are disturbed, have low strength characteristics and are

Beneath the loose surface soils, up to 3½ feet of fill material was encountered. The fill material

predominately consisted of gravelly silty sand, silty sand/clayey sand, sandy clay and silty sand with

gravel. The thickness and extent of fill material was determined based on limited test borings and visual

observation. Thicker fill may be present at the site. Limited testing was performed on the fill soils

during the time of our field and laboratory investigations. The limited testing indicates that the fill soils

Below the fill material, approximately 2 to 3 feet of loose to dense silty sand, silty sand/sandy silt or

sandy silt/sandy clay or very stiff sandy clay were encountered. Field and laboratory tests suggest that

these soils are moderately strong, slightly compressible, and have a moderate potential for expansion.

Penetration resistance ranged from 47 to 52 blows per foot. Dry densities ranged from 114 to 121 pcf.

A representative soil sample consolidated approximately 1½ percent under a 2 ksf load when saturated,

A representative soil sample had an angle of internal friction of 37 degrees. A representative sample of

Below approximately 6 to 7 feet, layers of predominately medium dense to dense silty sand, sandy silt,

silty sand/sand or silty sand/sandy silt were encountered. Field and laboratory tests suggest that these

soils are moderately strong and slightly compressible. Penetration resistance ranged from 19 to 41

blows per foot. Dry densities ranged from 71 to 121 pcf. Representative soil samples contained

approximately 10 to 87 percent fines. These soils have similar strength characteristics as the upper soils

Test boring locations were checked for the presence of groundwater during and immediately following

the drilling operations. Free groundwater was not encountered within a depth of 50 feet. However,

Krazan & Associates, Inc.

With Offices Serving The Western United States

planned finished subgrade levels should be cleaned to firm, undisturbed soil and backfilled with

Engineered Fill. In general, any septic tanks, debris pits, cesspools, or similar structures should be

entirely removed. Concrete footings should be removed to an equivalent depth of at least 3 feet below

ncountered, should be removed in accordance with the recommendations of the Soils Engineer. The

Trees and shrubs are located along the edges of the site. Tree and shrub removal operations should

include roots greater than 1 inch in diameter. The resulting excavations should be backfilled with

Engineered Fill compacted to a minimum of 90 percent of maximum density based on ASTM Test

Following stripping, fill removal operations and demolition activities, and prior to fill placement, the

exposed subgrade in building pad areas should be excavated to a depth of at least 12 inches, worked

until uniform and free from large clods, moisture-conditioned to a minimum of 2 percent above

optimum moisture content, and recompacted to a minimum of 90 percent of maximum density based on

ASTM Test Method D1557. Prior to backfilling, the exposed subgrade should be proof-rolled to verify

stability. Within pavement and exterior flatwork areas, following stripping, demolition, and fill removal

activities, the exposed subgrade should be excavated/scarified to a depth of at least 12 inches, worked

until uniform and free from large clods, moisture-conditioned to a minimum of 2 percent above

optimum moisture content, and recompacted to a minimum of 90 percent of maximum density based on

ASTM Test Method D1557. This compaction effort should stabilize the surface soils and locate any

unsuitable or pliant areas not found during our field investigation. Limits of recompaction should

exterior flatwork areas consist of non-expansive Engineered Fill or lime-treated Engineered Fill. The

intent is to support the slab-on-grade areas with 24 inches of non-expansive or lime-treated fill. The fill

placement serves two functions: 1) it provides a uniform amount of soil which will more evenly

distribute the soil pressures and 2) it reduces moisture content fluctuation in the clayey material beneath

the building area. The non-expansive fill material should be a well-graded silty sand or sandy silt soil.

water to drain into the expansive clayey soil below, which may result in soil swelling. Imported Fill

should be approved by the Soils Engineer prior to placement. The fill should be placed as specified as

In lieu of the use of non-expansive soils or lime-treated soils, the moisture content of the top 24 inches

should be moisture-conditioned to between 3 and 5 percent above optimum moisture content. The

moisture-conditioned clayey soils should be removed and recompacted to between 90 and 95 percent of

maximum density based on ASTM Test Method D1557. Over-compaction of the clayey material may

result in excessive post-construction swell pressures. In any event, some post-construction movement of

the reworked soil is expected, but careful moisture and compaction control should minimize the swell

potential. If construction takes place during the winter, early spring, or if the contractor elects to pond

the building site, the moisture content may be relatively high. It may not be necessary to remove and

Krazan & Associates, Inc.

A clean sand or very sandy soil is not acceptable for this purpose. A sandy soil will allow the surface

extend a minimum of 5 feet beyond buildings and 2 feet beyond flatwork and pavements.

proposed footing elevations or as recommended by the Soils Engineer. Any other buried structures

resulting excavations should be backfilled with Engineered Fill.

For additional information about the soils encountered, please refer to the boring logs in Appendix A.

ranged from loosely placed to compacted. A representative sample of the clayey soil had an expansion

with the field observations, was used to prepare the final boring logs in Appendix A.

SOIL PROFILE AND SUBSURFACE CONDITIONS

highly compressible when saturated.

the clayey soil had an expansion index of 62.

and extended to the termination depth of our borings.

Soil liquefaction is a state of soil particle suspension, caused by a complete loss of strength when the effective stress drops to zero. Liquefaction normally occurs in soils, such as sands, in which the strength is purely frictional. However, liquefaction has occurred in soils other than clean sands. Liquefaction usually occurs under vibratory conditions, such as those induced by seismic events.

To evaluate the liquefaction potential of the site, the following items were evaluated:

- Soil type
- 2) Groundwater depth Relative density
- 4) Initial confining pressure
- 5) Intensity and duration of groundshaking

The predominant soils within the project site consist of alternating layers of silty sand, sandy silt, silty sand/sandy silt, silty sand/sand and sandy silt/sandy clay. Groundwater was not encountered within a depth of 50 feet during our exploratory drilling. However, information obtained from the Department of Water Resources indicates that water wells had history water elevations as shallow as 2 feet below site grade within the project site vicinity.

The potential for soil liquefaction during a seismic event was evaluated using the LIQUEFYPRO computer program (version 5.8h) developed by CivilTech Software. For the analysis, a maximum earthquake magnitude of 6.26 was used. A peak horizontal ground surface acceleration of 0.225g was considered conservative and appropriate for the liquefaction analysis. An estimated high groundwater depth of 2 feet was used for our analysis. The computer analysis indicates that soils above a depth of 2 feet are non-liquefiable due to the absence of groundwater. The soils below a depth of 2 feet have a slight to very low potential for liquefaction under seismic shaking due to predominately medium dense/stiff to very dense/hard sandy and clayey soils and the anticipated low seismicity in the region. The analysis also indicates that the total and differential seismic induced settlement is not anticipated to exceed ¾ and ½ inch, respectively. Accordingly, measures to mitigate liquefaction potential are not

Krazan & Associates, Inc

With Offices Serving The Western United States 01219164 Report (MCE Retirement Building).doc

Page No. 10

moisture-condition the soil if the moisture content and relative density are as recommended. The moisture within the elayey soils should be maintained or re-established immediately before concrete pouring. Moisture contents within the upper 24 inches of soils should be verified by our office within 48 hours of concrete pouring. If this option is utilized, exterior footings should have a minimum embedment depth of 24 inches.

It is recommended that any uncertified fill material encountered within pavement areas be removed and/or recompacted. The fill materials should be moisture-conditioned to a minimum of 2 percent above optimum moisture and recompacted to a minimum of 90 percent of maximum density based on ASTM Test Method D1557. As an alternative, the Owner may elect not to recompact the existing fill within paved areas. However, the Owner should be aware that the paved areas may settle which may require annual maintenance. At a minimum, it is recommended that the upper 12 inches of subgrade soil be moisture-conditioned to a minimum of 2 percent above optimum moisture content and recompacted to a minimum of 90 percent of maximum density based on ASTM Test Method D1557.

The upper soils, during wet winter months become very moist due to the absorptive characteristics of the soil. Earthwork operations performed during winter months may encounter very moist unstable soils, which may require removal to grade a stable building foundation. Project site winterization consisting of placement of aggregate base and protecting exposed soils during the construction phase should be performed.

A representative of our firm should be present during all site clearing and grading operations to test and observe earthwork construction. This testing and observation is an integral part of our service as acceptance of earthwork construction is dependent upon compaction of the material and the stability of the material. The Soils Engineer may reject any material that does not meet compaction and stability earthwork construction will conform to recommendations set forth in this section and the Engineered Fill section.

Engineered Fill

The on-site upper native soils and fill material are predominately gravelly silty sand, silty sand/clayey sand, silty sand/sandy silt, sandy clay, sandy silt/silty clay and silty sand with gravel. The clayey soils will not be suitable for reuse as non-expansive Engineered Fill. The clayey soils will be suitable for reuse for fill placement within the upper 24 inches of conventional slab-on-grade and exterior flatwork areas, provided they are lime-treated. The preliminary application rate of lime should be 5 percent by dry weight. The lime material should be calcium oxide, commonly known as quick-lime. The clayey soils should be at or near optimum moisture-condition during mixing operations. Additional testing is recommended to determine the appropriate application rate of lime prior to placement. These soils will be suitable for reuse as General Engineered Fill provided they are moisture-conditioned to at least 2 percent above optimum moisture, and recompacted to between 90 and 95 percent of maximum density. based on ASTM Test Method D1557. The soils that do not contain clay will be suitable for re-use as non-expansive Engineered Fill provided they are cleansed of excessive organics and debris. However, it may be difficult for the contractor to separate these materials during grading operations.

> Krazan & Associates, Inc. With Offices Serving The Western United States

- R-Value at Equilibrium

maximum spacing. The weep holes should consist of 4-inch diameter holes (concrete walls) or unmortared head joints (masony walls) and not be higher than 18 inches above the lowest adjacent grade. Two 8-inch square overlapping patches of geotextile fabric (conforming to CalTrans Standard Specifications for "edge drains") should be affixed to the rear wall opening of each weep hole to retard

R-Value Test Results and Pavement Design

One R-value sample was obtained from the project site at the location shown on the attached site plan, The sample was tested in accordance with the State of California Materials Manual Test Designation 301. Results of the test are as follows:

Description

Silty Sand (SM)

The test result is moderate and indicates moderate subgrade support characteristics under dynamic
raffic loads. The following table shows the recommended pavement sections for various traffic indices
T D T N C NO D

based on an R-Value of 49. Due to the presence of clayey soils on site, the design R-Value should be confirmed following grading.

SHEET NUMBER:

density based on ASTM Test Method D1557. Additional lifts should not be placed if the previous lift did not meet the required density or if soil conditions are not stable. Drainage and Landscaping The ground surface should slope away from building pad and pavement areas toward appropriate drop

Plasticity Index

the project site at that time.

inlets or other surface drainage devices. In accordance with Section 1804 of the 2016 California Building Code, it is recommended that the ground surface adjacent to foundations be sloped a minimum of 5 percent for a minimum distance of 10 feet away from structures, or to an approved alternative means of drainage conveyance. Swales used for conveyance of drainage and located within 10 feet of foundations should be sloped a minimum of 2 percent. Impervious surfaces, such as payement and exterior concrete flatwork, within 10 feet of building foundations should be sloped a minimum of 1 percent away from the structure. Drainage gradients should be maintained to carry all surface water to collection facilities and off-site. These grades should be maintained for the life of the project.

Slots of weep holes should be placed in drop inlets or other surface drainage devices in pavement areas to allow free drainage of adjoining base course materials. Cutoff walls should be installed at pavement edges adjacent to vehicular traffic areas; these walls should extend to a minimum depth of 12 inches below pavement subgrades to limit the amount of seepage water that can infiltrate the pavements. Where cutoff walls are undesirable subgrade drains can be constructed to transport excess water away from planters to drainage interceptors. If cutoff walls can be successfully used at the site, construction of subgrade drains is considered unnecessary.

> Krazan & Associates, Inc With Offices Serving The Western United States

quick-lime. The clayey soils should be at or near optimum moisture during the mixing operations. In lieu of the use of non-expansive soils or lime-treated soils, the moisture content of the top 24 inches should be moisture-conditioned to between 3 and 5 percent above optimum moisture content. The moisture-conditioned clayer soils should be removed and recompacted to between 90 and 95 percent of maximum density based on ASTM Test Method D1557. Over-compaction of the clayey material may result in excessive post-construction swell pressures. In any event, some post-construction movement of the reworked soil is expected, but careful moisture and compaction control should minimize the swell

potential. If construction takes place during the winter, early spring, or if the contractor elects to pond

the building site, the moisture content may be relatively high. It may not be necessary to remove and

moisture-condition the soil if the moisture content and relative density are as recommended. The

moisture within the clayey soils should be maintained or re-established immediately before concrete

pouring. Moisture contents within the upper 24 inches of soils should be verified by our office within

As an alternative to the use of non-expansive soils, the upper 24 inches of soil supporting the slab-on-

grade and exterior flatwork areas can consist of lime-treated clayey soils. The lime-treated soils should

be recompacted to a minimum of 90 percent of maximum density. Preliminary application rate of lime

should be 5 percent by dry weight. The lime material should be calcium oxide, commonly known as

48 hours of concrete pouring. If this option is utilized, exterior footings should have a minimum embedment depth of 24 inches. Tree and shrub removal operations should include roots greater than 1 inch in diameter. The resulting excavations should be cleaned to firm native ground and backfilled with Engineered Fill compacted to a

minimum of 90 percent of maximum density based on ASTM Test Method D1557.

The site was previously occupied by a commercial development. In addition, the site is surrounded by and landscape irrigation lines that extend into the project site. Demolition activities should include proper removal of any buried structures. Any surface or buried structures encountered during construction should be properly removed and/or relocated. It is suspected that demolition activities of the existing utilities or structures will disturb the upper soils. After demolition activities, it is recommended that these disturbed soils be removed and/or recompacted. This compaction effort should stabilize the upper soils and locate any unsuitable or pliant areas not found during our field

Trees and shrubs are located along the edges of the site. Tree and shrub removal operations should include roots greater than 1 inch in diameter. The resulting excavations should be backfilled with Engineered Fill compacted to a minimum of 90 percent of maximum density based on ASTM Test. Method D1557.

After completion of the recommended site preparation and over-excavation, the site should be suitable for shallow footing support. The proposed structure footings may be designed utilizing an allowable bearing pressure of 2.500 psf for dead-plus-live loads. Footings should have a minimum embedment of 18 inches for the soil replacement alternatives and 24 inches for the moisture-conditioning option.

Krazan & Associates, Inc.

With Offices Serving The Western United States

KA No. 012-19164

Utility Trench Backfill Utility trenches should be excavated according to accepted engineering practice following OSHA (Occupational Safety and Health Administration) standards by a Contractor experienced in such work. The responsibility for the safety of open trenches should be borne by the Contractor. Traffic and vibration adjacent to trench walls should be minimized; cyclic wetting and drying of excavation side slopes should be avoided. Depending upon the location and depth of some utility trenches, groundwater flow into open excavations could be experienced, especially during or shortly following periods of

Utility trench backfill placed in or adjacent to buildings and exterior slabs should be compacted to at least 90 percent of the maximum density based on ASTM Test Method D1557. Utility trench backfill placed in payement areas should be compacted to at least 95 percent of the maximum density based on ASTM Test Method D1557. Pipe bedding should be in accordance with pipe manufacturer's

Sandy and gravelly soil conditions were encountered at the site. These cohesionless soils have a tendency to cave in trench wall excavations. Shoring or sloping back trench sidewalls may be required within these sandy and gravelly soils.

The Contractor is responsible for removing all water-sensitive soils from the trench regardless of the backfill location and compaction requirements. The Contractor should use appropriate equipment and methods to avoid damage to the utilities and/or structures during fill placement and compaction.

Foundations - Conventional

After completion of the recommended site preparation, the proposed structures may be supported on a shallow conventional foundation system. The proposed structures may be supported on a shallow foundation system bearing on undisturbed native soils or Engineered Fill. Spread and continuous footings can be designed for the following maximum allowable soil bearing pressures:

	(a) 4 (25 (A)
Leals IC saload of Holy expirat	Allowable Loading
ad Load Only	1,875 psf
ad-Plus-Live Load	2,500 psf
tal Load, including wind or seismic loads	3,325 psf

Structures should have exterior wall footing placed at least 18 inches deep for the soil replacement or lime treatment alternate, and 24 inches for reworking of the expansive soil alternate. Depths cited, should be measured from rough grade or exterior grade, whichever is lower. The interior footings should be at least 12 inches below subgrade. The placement of continuous perimeter footings at the recommended depth will have an encapsulation will retard moisture fluctuations in the soil and should

Krazan & Associates, Inc.

With Offices Serving The Western United States 01219164 Report (MCE Retirement Building).doc

reduce post-construction soil movement. Actual foundation and slab movement cannot be accurately determined because it will be influenced by post-construction moisture fluctuation, such as landscape water. However, movement is expected to be less than 1½ inches.

Differential movement should be less than ½ inch. Most of the settlement is expected to occur during construction as the loads are applied. However, additional post-construction settlement may occur if the foundation soils are flooded or saturated.

The total soil movement for the soil replacement alternatives is not expected to exceed 1 inch.

The footing excavations should not be allowed to dry out any time prior to pouring concrete. It is recommended that footings be reinforced by at least one No. 4 reinforcing bar in both top and bottom. Resistance to lateral footing displacement can be computed using an allowable friction factor of 0.30

alternatively be developed using an allowable equivalent fluid passive pressure of 250 pounds per cubic foot acting against the appropriate vertical footing faces. The frictional and passive resistance of the soil may be combined without reduction in determining the total lateral resistance. A 1/2 increase in the above value may be used for short duration, wind, or seismic loads.

acting between the base of foundations and the supporting subgrade. Lateral resistance for footings can

Floor Slabs and Exterior Flatwork

Concrete slab-on-grade floors should be underlain by a water vapor retarder. The water vapor retarder should be installed in accordance with accepted engineering practice. The water vapor retarder should consist of a vapor retarder sheeting underlain by a minimum of 3 inches of compacted, clean, gravel of 4-inch maximum size. To aid in concrete curing an optional 2 to 4 inches of granular fill may be placed on top of the vapor retarder. The granular fill should consist of damp clean sand with at least 10 to 30 percent of the sand passing the 100 sieve. The sand should be free of clay, silt, or organic material. Rock dust which is manufactured sand from rock crushing operations is typically suitable for the granular fill. This granular fill material should be compacted.

It is recommended that the concrete slab be reinforced to reduce crack separation and possible vertical offset at the cracks. We recommend at least No. 3 reinforcing bars placed on 18-inch centers, be used for this purpose. The reinforcement should be placed at mid-height within the slab. Thicker floor slabs with increased concrete strength and reinforcement should be designed wherever heavy concentrated loads, heavy equipment, or machinery is anticipated

The exterior floors should be poured separately in order to act independently of the walls and

foundation system. Exterior finish grades should be sloped a minimum of 2 percent away from all

interior slab areas to preclude ponding of water adjacent to the structures. All fills required to bring the

building pads to grade should be Engineered Fills. Moisture within the structure may be derived from water vapors, which were transformed from the moisture within the soils. This moisture vapor can travel through the vapor membrane and penetrate the slab-on-grade. This moisture vapor penetration can affect floor coverings and produce mold and mildew in the structure. To reduce moisture vapor intrusion, it is recommended that a vapor retarder be

01219164 Report (MCE Retirement Building).doc

PORTLAND CEMENT PAVEMENT

LIGHT DUTY Traffic Index | Portland Cement Concrete*** | Class II Aggregate Base* | Compacted Subgrade** 4.0"

HEAVY DUTY Traffic Index Portland Cement Concrete*** Class II Aggregate Base* Compacted Subgrade**
7.0 6.5" 4.0" 12.0" * 95% compaction based on ASTM Test Method D1557 or CAL 216
** 90% compaction based on ASTM Test Method D1557 or CAL 216
***Minimum compressive strength of 3000 psi

It is recommended that any uncertified fill material encountered within pavement areas be removed and/or recompacted. The fill materials should be moisture-conditioned to near optimum moisture and recompacted to a minimum of 90 percent of maximum density based on ASTM Test Method D1557. As an alternative, the Owner may elect not to recompact the existing fill within paved areas. However, the Owner should be aware that the paved areas may settle which may require annual maintenance. At a minimum, it is recommended that the upper 12 inches of subgrade soil be moisture-conditioned as necessary and recompacted to a minimum of 90 percent of maximum density based on ASTM Test Method D1557.

Seismic Parameters - 2016 California Building Code

The Site Class per Section 1613 of the 2016 California Building Code (2016 CBC) and Table 20.3-1 of ASCE 7-10 is based upon the site soil conditions. It is our opinion that a Site Class D is most consistent with the subject site soil conditions. For seismic design of the structures based on the seismic provisions of the 2016 CBC, we recommend the following parameters:

Seismic Item	Value	CBC Reference
Site Class	D	Section 1613.3.2
Site Coefficient Fa	1.282	Table 1613.3.3 (1)
Ss	0.647	Section 1613.3.1
S _{MS}	0.830	Section 1613.3.3
S _{DS}	0.553	Section 1613.3.4
Site Coefficient Fv	1:856	Table 1613.3.3 (2)
S ₁	0.272	Section 1613.3.1
S _{M1}	0.505	Section 1613.3.3
S _{D1}	0.337	Section 1613.3.4

Krazan & Associates, Inc.

KA No. 012-19164 Page No. 17

Soil Cement Reactivity

Excessive sulfate in either the soil or native water may result in an adverse reaction between the cement in concrete (or stucco) and the soil. HUD/FHA and CBC have developed criteria for evaluation of sulfate levels and how they relate to cement reactivity with soil and/or water.

Soil samples were obtained from the site and tested in accordance with State of California Materials Manual Test Designation 417. The sulfate concentrations detected from these soil samples were less than 150 ppm and are below the maximum allowable values established by HUD/FHA and CBC. However, it is recommended that a Type II cement be used within the concrete to compensate for sulfate reactivity with the cement.

Compacted Material Acceptance

Compaction specifications are not the only criteria for acceptance of the site grading or other such activities. However, the compaction test is the most universally recognized test method for assessing the performance of the Grading Contractor. The numerical test results from the compaction test cannot be used to predict the engineering performance of the compacted material. Therefore, the acceptance of compacted materials will also be dependent on the stability of that material. The Soils Engineer has the option of rejecting any compacted material regardless of the degree of compaction if that material is considered to be unstable or if future instability is suspected. A specific example of rejection of fill material passing the required percent compaction is a fill which has been compacted with an in situ moisture content significantly less than optimum moisture. This type of dry fill (brittle fill) is susceptible to future settlement if it becomes saturated or flooded.

Testing and Inspection

A representative of Krazan & Associates, Inc. should be present at the site during the earthwork activities to confirm that actual subsurface conditions are consistent with the exploratory fieldwork. This activity is an integral part of our service, as acceptance of earthwork construction is dependent upon compaction testing and stability of the material. This representative can also verify that the intent of these recommendations is incorporated into the project design and construction. Krazan & Associates, Inc. will not be responsible for grades or staking, since this is the responsibility of the Prime Contractor.

LIMITATIONS

Soils Engineering is one of the newest divisions of Civil Engineering. This branch of Civil Engineering is constantly improving as new technologies and understanding of earth sciences advance. Although your site was analyzed using the most appropriate and most current techniques and methods, undoubtedly there will be substantial future improvements in this branch of engineering. In addition to advancements in the field of Soils Engineering, physical changes in the site, either due to excavation or fill placement, new agency regulations, or possible changes in the proposed structure after the soils

> Krazan & Associates, Inc. With Offices Serving The Western United States

KA No. 012-19164

report is completed may require the soils report to be professionally reviewed. In light of this, the Owner should be aware that there is a practical limit to the usefulness of this report without critical review. Although the time limit for this review is strictly arbitrary, it is suggested that 2 years be considered a reasonable time for the usefulness of this report.

Foundation and earthwork construction is characterized by the presence of a calculated risk that soil and groundwater conditions have been fully revealed by the original foundation investigation. This risk is derived from the practical necessity of basing interpretations and design conclusions on limited sampling of the earth. The recommendations made in this report are based on the assumption that soil conditions do not vary significantly from those disclosed during our field investigation. If any variations or undesirable conditions are encountered during construction, the Soils Engineer should be notified so that supplemental recommendations may be made.

The conclusions of this report are based on the information provided regarding the proposed construction. If the proposed construction is relocated or redesigned, the conclusions in this report may not be valid. The Soils Engineer should be notified of any changes so the recommendations may be reviewed and re-evaluated.

This report is a Geotechnical Engineering Investigation with the purpose of evaluating the soil conditions in terms of foundation design. The scope of our services did not include any Environmental Site Assessment for the presence or absence of hazardous and/or toxic materials in the soil, groundwater, or atmosphere; or the presence of wetlands. Any statements, or absence of statements, in this report or on any boring log regarding odors, unusual or suspicious items, or conditions observed, are strictly for descriptive purposes and are not intended to convey engineering judgment regarding potential hazardous and/or toxic assessment.

The geotechnical engineering information presented herein is based upon professional interpretation utilizing standard engineering practices and a degree of conservatism deemed proper for this project. It is not warranted that such information and interpretation cannot be superseded by future geotechnical engineering developments. We emphasize that this report is valid for the project outlined above and should not be used for any other sites.

Drawn By: SY, NI Job. No.: 22-050

EROSION CONTROL PLAN NOTES:

- RETAIN FLOATABLE WIND BLOWN MATERIALS ON SITE BY STORING ALL TRASH AND BUILDING MATERIAL WASTE IN ENCLOSURES UNTIL DISPOSAL AT OFF-SITE FACILITIES. CHECK ADJACENT AREAS DAILY AND PICK UP CONSTRUCTION WASTE MATERIALS AND DEBRIS THAT HAVE BLOWN OR WASHED
- PERMANENTLY STABILIZE ALL SURFACE AREA WITHIN AND ADJACENT TO THIS SITE THAT IS DISTURBED BY VEHICLES, GRADING AND OTHER CONSTRUCTION FOR THE PROPOSED FACILITY. STABILIZATION IS OBTAINED WHEN THE DISTURBED SURFACE IS COVERED WITH STRUCTURES, PAVING AND OR PERENNIAL VEGETATION HAVING A UNIFORM COVERAGE DENSITY OF AT LEAST 70%. STABILIZATION OF ALL DISTURBED AREA IS REQUIRED
- CONTRACTORS SHALL INSPECT POLLUTION CONTROL MEASURES AT LEAST ONCE EVERY 14 DAYS AND WITHIN 24 HOURS AFTER A STORM EVENT OF 1/2 INCH OR GREATER. DAMAGED MEASURES THAT PROVE TO BE INEFFECTIVE SHALL BE REPLACED WITH MORE EFFECTIVE MEASURES OR ADDITIONAL MEASURES WITHIN SEVEN DAYS. REPEATED FAILURE OF A CONTROL MEASURE REQUIRES INSTALLATION OF A MORE SUITABLE DEVICE TO PREVENT DISCHARGE OF POLLUTANTS FROM THE CONSTRUCTION SITE.
- INSTALLATION OF ADDITIONAL EROSION CONTROL MEASURES MAY BE REQUIRED BY THE CITY OR STATE. CONTRACTOR TO VERIFY REQUIREMENTS
- CARE SHALL BE TAKEN TO MINIMIZE THE ENCROACHMENT OF SEDIMENT INTO ALL STORM DRAIN APPURTENANCES, PUBLIC STREETS, AND ONTO PRIVATE PROPERTY UNTIL IMPERVIOUS MATERIAL (ROAD/PARKING AREA SURFACE) IS APPLIED OR UNTIL PROPOSED LANDSCAPE HAS BEEN
- ALL GRASS SLOPES WHICH EXCEED 3:1 (H:V) SHALL UTILIZE CONTECH CONSTRUCTION PRODUCTS PERMANENT TURF REINFORCEMENT MATS TRM 450 OR APPROVED EQUAL. MATS SHALL BE INSTALLED PER MANUFACTURER'S SPECIFICATIONS AND STANDARDS. CONTRACTOR SHALL COORDINATE

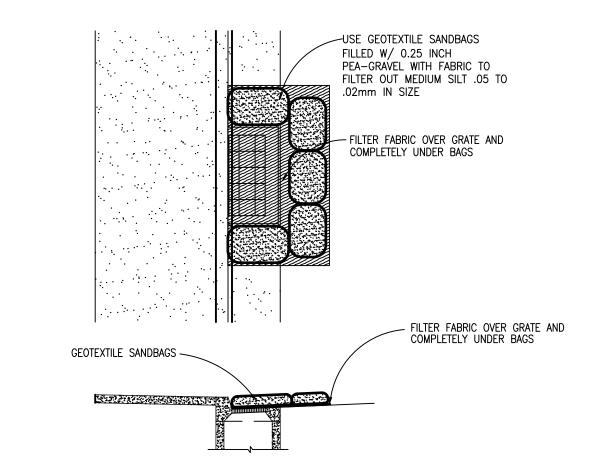

INFILTRATION TRENCH/BASIN CONSTRUCTION NOTES:

BEFORE CONSTRUCTION BEGINS, STABILIZE THE ENTIRE AREA DRAINING TO THE FACILITY. IF IMPOSSIBLE, PLACE A DIVERSION BERM AROUND THE PERIMETER OF THE INFILTRATION SITE TO PREVENT SEDIMENT ENTRANCE DURING CONSTRUCTION OR REMOVE THE TOP 2 INCHES OF SOIL AFTER THE SITE IS STABILILIZED. STABILIZE THE ENTIRE CONTRIBUTING DRAINAGE AREA, INCLUDING THE SIDE SLOPES, BEFORE ALLOWING ANY RUNOFF TO ENTER ONCE CONSTRUCTION IS COMPLETE.

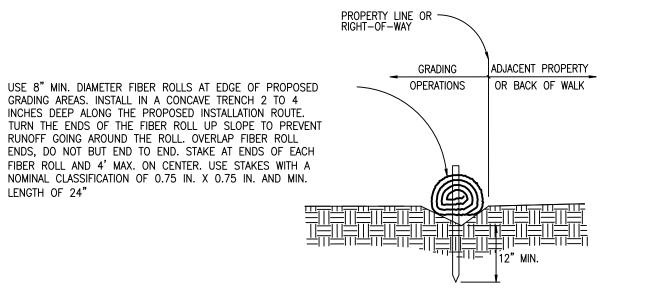

PLACE EXCAVATED MATERIAL SUCH THAT IT CAN NOT BE WASHED BACK INTO THE BASIN IF A STORM OCCURS DURING

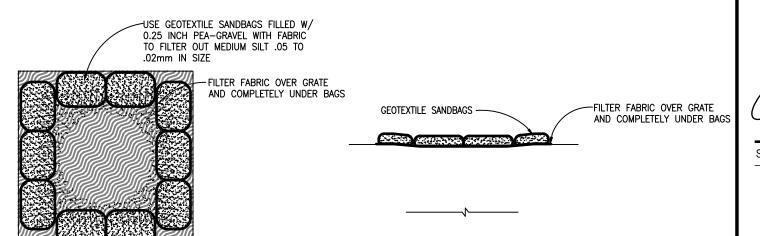

BUILD THE TRENCH/BASIN WITHOUT DRIVING HEAVY EQUIPMENT OVER THE INFILTRATION SURFACE. ANY EQUIPMENT DRIVEN ON THE SURFACE SHOULD HAVE EXTRA-WIDE ("LOW PRESSURE") TIRES. PRIOR TO ANY CONSTRUCTION, ROPE OFF THE INFILTRATION AREA TO STOP ENTRANCE BY UNWANTED EQUIPMENT.

4. AFTER FINAL GRADING, TILL THE INFILTRATION SURFACE DEEPLY.

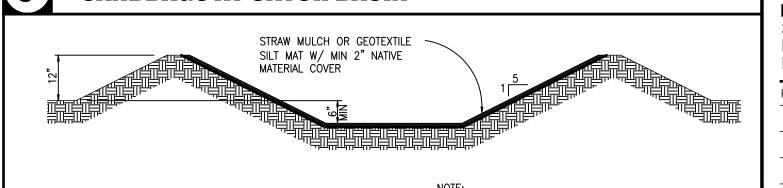

CURB INLET PROTECTION

SANDBAGS AT CATCH BASIN

1. CONTRACTOR TO DETERMINE EXACT SIZE AND LOCATION OF STORAGE AREA. 2. STORAGE AREA TO BE USED FOR EQUIPMENT PARKING AND FUELING AND STORAGE OF MATERIALS.

8. ALL INTERIOR SHEAR WALLS TO BE EXTENDED TO ROOF WITH EDGE NAILS TO ROOF SHEATHING

6. APPLIES TO NAILING AT ALL STUDS, TOP AND BOTTOM PLATES AND BLOCKING

11. PROVIDE SIMPSON A35 ON 3x STUDS TO CONNECT STUDS TO SILL PLATE

12. USE SIMPSON RFB5x10 WITH SIMP. 'SET' EPOXY FOR RETROFIT ANCHOR BOLTS

4.) HOLDOWNS ARE TO BE PLACED ADJACENT TO WALL ENDS, DOOR AND WINDOW OPENINGS

5.) ALL NAILING SHALL BE PER THE 2019 CBC, TABLE 2304.10.1 UNLESS OTHERWISE NOTED.

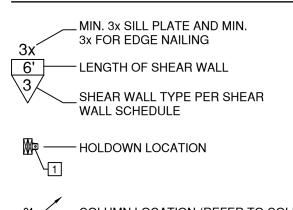

CENTERED ON 4x OR (2)2x STUD U.N.O. ADJACENT TO DOOR AND WINDOW TRIMMER

1. FIRST FLOOR SHEAR WALL TOP PLATE SPLICE SHALL HAVE MINIMUM (27)-16d COMMON NAILS OR USE A MST60.

2. ROOF DIAPHRAGM SHEAR WALLS ON SECOND FLOOR TOP PLATE SPLICE SHALL HAVE MINIMUM (17)-16d COMMON NAILS OR USE A MST27.

SYMBOL	HOLDOWN TYPE	ALLOWABLE TENSION (LB)
1	SIMPSON MST48 CENTERED ON 4x (OR 2-2x STUDS) w/ (26) 0.162x2 1/2" (N16) FASTENERS.	3210
2	SIMPSON MST72 CENTERED ON 4x (OR 2-2x STUDS) w/ (54) 0.162x2 1/2" (N16) FASTENERS.	6730
3	SIMPSON HU2-SDS2.5 CENTERED ON 4x POST (OR CENTERED ON 2-2x STUDS) w/ SSTB16 ANCHOR BOLT w/ (6) SDS SCREWS PER MANUFACTURER.	3075
4	SIMPSON HU5-SDS2.5 CENTERED ON 4x POST (OR CENTERED ON 2-2x STUDS) w/ SSTB24 ANCHOR BOLT w/ (14) SDS SCREWS PER MANUFACTURER.	5645
5	SIMPSON HU11-SDS2.5 CENTERED ON 6x POST (OR CENTERED ON 2-3x STUDS) w/ SB1x30 ANCHOR BOLT w/ (30) SDS SCREWS PER MANUFACTURER.	9535
6	SIMPSON HU14-SDS2.5 CENTERED ON 6x POST (OR CENTERED ON 2-3x STUDS) w/ SB1x30 ANCHOR BOLT w/ (36) SDS SCREWS PER MANUFACTURER (REQUIRES HEAVY HEX ANCHOR NUT).	14445

ENGINEERING & SURVEYING

It is the clients responsibility prior to or during construction to notify the designer in writing

It is the clients responsibility into the during construction of many free-resided errors or omissions in the plans and specifications of which a contractor thoroughly knowledgeable with the building codes and methods of construction should reasonably be aware. Written instructions addressing such perceived errors or omissions shall be received from the designer prior to the client or clients subcontractors proceeding with the work. The client will be responsible for any defects in construction if these procedures are not follower.

DUCTWORK NOTES

- 1. ALL WORK TO BE DONE IN ACCORDANCE WITH THE LATEST EDITION OF THE APPLICABLE SMACNA STANDARDS AND FABRICATION GUIDELINES. ALL METAL DUCTS SHALL BE CONSTRUCTED OF GALVANIZED SHEET METAL PER CALIFORNIA MECHANICAL CODE STANDARDS, UNLESS NOTED OTHERWISE.
- 2. DUCT PRESSURE CLASS SHALL BE MINIMUM 2" W.C. AND SHALL EXCEED THE FAN SYSTEM DESIGN EXTERNAL STATIC PRESSURE WHERE APPLICABLE.
- 3. PROVIDE TURNING VANES ON ALL SQUARE THROAT ELBOWS. RADIUS ELBOWS SHALL HAVE A THROAT RADIUS EQUAL TO OR GREATER THAN THE DUCT WIDTH. (USE SMACNA ELBOW TYPES RE 1 OR RE 2 ONLY, UNLESS NOTED OTHERWISE.)
- 4. DIVIDED FLOW BRANCHES SHALL SPLIT WITH ELBOWS PER NOTE 2. (USE SMACNA TYPE 1. 2, OR 4A/4B UNLESS NOTED OTHERWISE.)
- 5. BRANCH FITTING TAKEOFFS SHALL BE WYES, 45° LEAD IN, OR CONICAL/BELLMOUTH TAPS UNLESS NOTED OTHERWISE. DO NOT USE STRAIGHT TAPS.
- 6. ALL SUPPLY AND RETURN DUCT SHALL BE INSULATED PER T24 THICKNESS AND R-VALUE REQUIREMENTS (CEC 120.4(a)): 6.1. SUPPLY DUCT: MIN. R-4.2, BUT R-8 WHERE EXPOSED TO EXTERIOR OR
 - UNCONDITIONED SPACE.
 - 6.2. RETURN DUCT: MIN. R-4.2, BUT R-8 WHERE EXPOSED TO EXTERIOR OR UNCONDITIONED SPACE.
- 6.3. EXHAUST DUCT: NO INSULATION EXCEPT AS SHOWN.
- 7. EXTERIOR INSULATION EXPOSED TO WEATHER SHALL BE WEATHERPROOFED AND SHALL
- BE PAINTED TO MATCH ADJACENT SURFACE. 8. PROVIDE DUCT LEAKAGE TEST PER CMC 603.10.1.

MECHANICAL GENERAL NOTES

- SCOPE: A NEW COMPLETE HVAC SYSTEM, INCLUDING MECHANICAL EQUIPMENT & DUCTWORK AS GENERALLY DELINEATED ON THE DRAWINGS. EQUIPMENT SHALL COMPLY WITH TITLE 24 CALIFORNIA CODE OF REGULATIONS.
- 2. CODES: ALL WORK MATERIAL AND EQUIPMENT SHALL BE FURNISHED AND INSTALLED IN COMPLIANCE WITH THE FOLLOWING CODES AS ADOPTED AND AMENDED BY THE INSPECTING AUTHORITY HAVING JURISDICTION. NOTHING IN THESE PLANS SHALL BE CONSTRUED TO PERMIT THE INSTALLATION OF WORK, MATERIAL OR EQUIPMENT NOT CONFORMING TO THESE OR OTHER CODES APPLICABLE TO THIS PROJECT:
 - A. 2019 CALIFORNIA ADMINISTRATIVE CODE (CAC) PART 1, TITLE 24, CALIFORNIA CODE OF **REGULATIONS (CCR)**
 - B. 2019 CALIFORNIA BUILDING CODE (CBC) PART 2, TITLE 24, CCR BASED ON THE 2018 INTERNATIONAL BUILDING CODE (IBC)
 - C. 2019 CALIFORNIA ELECTRICAL CODE (CEC) PART 3, TITLE 24, CCR BASED ON THE 2017 NATIONAL ELECTRICAL CODE (NEC)
 - D. 2019 CALIFORNIA MECHANICAL CODE (CMC) PART 4, TITLE 24, CCR BASED ON THE 2018 UNIFORM MECHANICAL CODE (UMC)
 - E. 2019 CALIFORNIA PLUMBING CODE (CPC) PART 5, TITLE 24, CCR BASED ON THE 2018
 - UNIFORM PLUMBING CODE (UPC) F. 2019 CALIFORNIA ENERGY CODE (CEC) PART 6, TITLE 24 CCR.
 - G. 2019 CALIFORNIA FIRE CODE (CFC) PART 9, TITLE 24, CCR BASED ON THE 2018 INTERNATIONAL FIRE CODE (IFC)
 - H. 2019 CALIFORNIA GREEN BUILDING STANDARDS (CGBSC) PART 11, TITLE 24, CCR
 - WORKMANSHIP:
- ALL WORKMANSHIP SHALL BE DONE IN A NEAT AND ORDERLY MANNER ACCORDING TO THE BEST TRADE PRACTICE BY THOSE SKILLED IN THE PARTICULAR TRADE. EQUIPMENT, DUCTS, GRILLES, ETC., SHALL BE PLUMB, LEVEL, SQUARE OR CENTERED ETC., TO GIVE A NEAT AND PLEASING APPEARANCE. ALL EQUIPMENT SHALL BE INSTALLED IN STRICT COMPLIANCE WITH MANUFACTURER'S RECOMMENDATIONS. 4. AVAILABLE POWER:
- THE MECHANICAL CONTRACTOR SHALL CONFIRM ALL SYSTEMS VOLTAGES BEFORE BIDDING OR ORDERING EQUIPMENT, AND SHALL ALLOW FOR BUCK & BOOST TRANSFORMERS IF REQUIRED. AIR BALANCE:
- THE AIR DISTRIBUTION SYSTEM SHALL BE BALANCED TO DELIVER SPECIFIED AIR QUANTITIES FOLLOWING THE PROCEDURES OF THE LATEST EDITION OF THE SMACNA PUBLICATION PROCEDURAL STANDARDS FOR TESTING ADJUSTING & BALANCING OF ENVIRONMENTAL SYSTEMS. CONTRACTOR SHALL PROVIDE ACCESSIBLE & ADJUSTABLE VOLUME DAMPERS AS REQUIRED TO BALANCE THE SYSTEMS AND MAINTAIN A NOISE CRITERIA LEVEL NOT TO EXCEED
- THE AIR BALANCE TECHNICIAN SHALL BE RESPONSIBLE TO MODIFY ALL SUPPLY, RETURN, AND EXHAUST FAN SHEAVES & VFD OUTPUT FREQUENCY LIMITS AS APPLICABLE SUCH THAT THE DESIGN AIR FLOWS ARE MET. ALL SUPPLY FANS CONTROLLED FOR FILTER LOADING SHALL SIMILARLY BE MODIFIED TO ENSURE THE FULL RANGE OF MOTOR POWER IS AVAILABLE TO THE CONTROL SYSTEM. RATED MAXIMUM FAN SPEED SHALL NOT BE EXCEEDED.
- 6. PERMITS AND UTILITY SERVICE FEES: CONTRACTOR TO ARRANGE AND PAY FOR ALL PERMITS, INSPECTIONS AND SERVICE CHARGES REQUIRED IN THE INSTALLATION OF THE WORK.
- EXISTING INFORMATION: LOCATION, SIZE, MATERIAL, ETC. OF EXISTING SYSTEMS, ETC., IS PROVIDED FROM SOURCES DEEMED TO BE RELIABLE BUT IS NOT GUARANTEED. CONTRACTOR SHALL FIELD VERIFY ALL DATA BEFORE PROCEEDING WITH ANY WORK. NO EXTRA COST WILL BE ALLOWED FOR CONDITIONS NOT AS SHOWN. ACCURACY:
- PLANS ARE DIAGRAMMATIC. CONTRACTOR SHALL CONFIRM ALL DIMENSIONS AND LOCATIONS OF AC UNITS, EXHAUST FANS, WALLS, PARTITIONS ETC., AGAINST ARCHITECTURAL AND STRUCTURAL DESIGN PLANS FOR LOCATION CONSISTENCY & ACCURACY PRIOR TO COMMENCING WITH ANY WORK. 9. PAINTING:
- PAINT ALL VISIBLE INTERIOR PORTIONS OF TERMINAL DEVICES & CANS WITH FLAT BLACK ENAMEL PAINT. 10. SIZES:
- DUCTWORK SIZES ON PLANS ARE INSIDE NET FREE AREA. 11. MECHANICAL EQUIPMENT:
- ALL EQUIPMENT SHALL BE LISTED BY AN APPROVED TESTING AGENCY AND INSTALLED IN ACCORDANCE WITH ITS INSTALLATION INSTRUCTIONS AND LISTING.

DEMOLITION NOTES

- THE CONTRACTOR SHALL VISIT THE PROJECT SITE AND MAKE HIMSELF AWARE OF ALL EXISTING CONDITIONS WHICH CAN BE OBSERVED. ADDITIONAL COSTS WILL NOT BE ALLOWED FOR CORRECTION OF ITEMS WHICH CAN BE OBSERVED AND THEREFORE SHOULD BE INCLUDED IN HIS BID. THE CONTRACTOR IS RESPONSIBLE FOR ALL DEMOLITION WORK REQUIRED TO COMPLETE THIS PROPOSED PROJECT.
- 2. THE NOTES AND DRAWINGS CONTAINED ON THIS SHEET DESCRIBE IN A GENERAL SENSE THE EXTENT OF ITEMS TO BE MODIFIED, REMOVED OR INSTALLED. THIS DESCRIPTION DOES NOT NECESSARILY INCLUDE A DESCRIPTION OF ITEMS TO BE REPAIRED OR REFINISHED AS A RESULT OF THIS REMOVAL OR MODIFICATION. IN THE ABSENCE OF ANY SPECIFIC DIRECTION, THE CONTRACTOR SHALL REPAIR THE AFFECTED AREA(S) TO A CONDITION EQUAL TO THE ADJACENT AREA(S) AND/OR SIMILAR EXISTING CONDITIONS ON PROJECT.
- THE CONTRACTOR SHALL PROVIDE DUST AND DEBRIS CONTROL THROUGHOUT THE PROJECT'S CONSTRUCTION. THE CONTRACTOR SHALL COORDINATE HIS WORK WITH THE BUILDING OWNER TO PROVIDE THE LEAST INTERRUPTION OF EXISTING BUILDING OPERATIONS. COORDINATE WITH THE OWNER THE LOCATION OF ON-SITE STORAGE AND STAGING.
- NOT ALL REQUIRED PATCHING AND/OR REPAIRS ARE SPECIFICALLY NOTED ON THIS PLAN. COORDINATE DEMOLITION WORK WITH NEW PROPOSED FLOOR PLANS.
- CONTRACTOR SHALL DISCARD AND DISPOSE OF ALL DEMOLISHED ITEMS. EXISTING PIPING AND ELECTRICAL OR COMMUNICATION CONDUITS WHICH INTERFERE WITH THE WORK SHALL BE RE-ROUTED BY THE CONTRACTOR.

1. DISCONNECT BY ELECTRICAL. PROVIDE CONDENSATE PUMP & CONDENSATE OVERFLOW SWITCH.

2. PROVIDE 7 DAY PROGRAMMABLE THERMOSTAT MOUNTED AT TOP TO 48"AFF. INDOOR SUPPLY FANS SHALL BE SET TO RUN CONTINUOUSLY DURING OCCUPIED MODE.

3. PROVIDE AUTOMATIC SMOKE DETECTOR SHUT-OFF PER CALIFORNIA MECHANICAL CODE SECTION 608.0, SEE MECHANICAL GENERAL NOTE 12.

4. PROVIDE WITH MITSUBISHI FB PRE FILTER BOX & MERV-13 FILTERS.

5. CONNECT TO HP-1.

7. PROVIDE WITH OCCUPANCY SENSOR CONTROLS INCLUDING: TRACER CONCIERGE SYSTEM TRANE #BMTC060CBC012000 (120V/1PH, 5A MAX) WITH OPTIONAL 10" DISPLAY. PROVIDE TEMPERATURE SENSOR WITH DIGITAL DISPLAY TRANE #WCS-SD & OCCUPANCY SENSORS TRANE #WSC-SO PER PLANS. MOUNT TOP OF SENSOR AT 48"AFF.

1. PROVIDE WITH FACTORY HARD WIRED THERMOSTAT. T-STAT TO BE ACCESSIBLE WITH TOP MOUNTED AT 48" AFF. SEE FLOOR PLANS. ELECTRICAL SUPPLY IS FED FROM OUTDOOR UNIT THROUGH FIELD-SUPPLIED WIRING PER MANUFACTURER'S SPECIFICATIONS. FAN COIL TO BE MOUNTED ABOVE THE HEIGHT OF THE THERMOSTAT. 2. PROVIDE WITH CONDENSATE PUMP.

Job. No.: 22-050 SHEET NUMBER:

MECHANICAL GREEN BUILDING CODE NOTES

5.410.2.5 DOCUMENTATION AND TRAINING. [N] A SYSTEMS MANUAL AND SYSTEMS OPERATIONS TRAINING ARE REQUIRED, INCLUDING OCCUPATIONAL SAFETY AND HEALTH ACT (OSHA) REQUIREMENTS IN CALIFORNIA CODE OF REGULATIONS (CCR), TITLE 8. SECTION 5142, AND OTHER

5.410.2.5.1 SYSTEMS MANUAL. [N] DOCUMENTATION OF THE OPERATIONAL ASPECTS OF THE BUILDING SHALL BE COMPLETED WITHIN THE SYSTEMS MANUAL AND DELIVERED TO THE BUILDING OWNER OR REPRESENTATIVE. THE SYSTEMS MANUAL SHALL INCLUDE THE FOLLOWING:

1. SITE INFORMATION, INCLUDING FACILITY DESCRIPTION, HISTORY AND CURRENT REQUIREMENTS. SITE CONTACT INFORMATION

BASIC OPERATIONS AND MAINTENANCE, INCLUDING GENERAL SITE OPERATING PROCEDURES, BASIC TROUBLESHOOTING, RECOMMENDED MAINTENANCE REQUIREMENTS, SITE EVENTS LOG.

MAJOR SYSTEMS. 5. SITE EQUIPMENT INVENTORY AND MAINTENANCE NOTES.

6. A COPY OF VERIFICATIONS REQUIRED BY THE ENFORCING AGENCY OR THIS CODE. 7. OTHER RESOURCES AND DOCUMENTATION, IF APPLICABLE.

5.410.2.5.2 SYSTEMS OPERATIONS TRAINING. [N] A PROGRAM FOR TRAINING OF THE APPROPRIATE MAINTENANCE STAFF FOR EACH EQUIPMENT TYPE AND/OR SYSTEM SHALL BE DEVELOPED AND DOCUMENTED IN THE COMMISSIONING REPORT AND SHALL INCLUDE THE FOLLOWING:

1. SYSTEM/EQUIPMENT OVERVIEW (WHAT IT IS, WHAT IT DOES AND WITH WHAT OTHER SYSTEMS AND/OR EQUIPMENT IT INTERFACES).

REVIEW AND DEMONSTRATION OF SERVICING/PREVENTIVE MAINTENANCE. 3. REVIEW OF THE INFORMATION IN THE SYSTEMS MANUAL.

4. REVIEW OF THE RECORD DRAWINGS ON THE SYSTEM/EQUIPMENT.

5.410.2.6 COMMISSIONING REPORT. INI A REPORT OF COMMISSIONING PROCESS ACTIVITIES UNDERTAKEN THROUGH THE DESIGN AND CONSTRUCTION PHASES OF THE BUILDING PROJECT SHALL BE COMPLETED AND PROVIDED TO THE OWNER OR REPRESENTATIVE.

5.410.4 TESTING AND ADJUSTING. TESTING AND ADJUSTING OF SYSTEMS SHALL BE REQUIRED FOR BUILDINGS LESS THAN 10,000 SQUARE FEET OR NEW SYSTEMS TO SERVE AN ADDITION OR ALTERATION SUBJECT TO SECTION 303.1.

5.410.4.2 SYSTEMS. DEVELOP A WRITTEN PLAN OF PROCEDURES FOR TESTING AND ADJUSTING SYSTEMS, SYSTEMS TO BE INCLUDED FOR TESTING AND ADJUSTING SHALL INCLUDE AT A MINIMUM, AS APPLICABLE TO THE PROJECT:

. HVAC SYSTEMS AND CONTROLS.

REQUIRED

INDOOR AND OUTDOOR LIGHTING AND CONTROLS.

WATER HEATING SYSTEMS. RENEWABLE ENERGY SYSTEMS. LANDSCAPE IRRIGATION SYSTEMS.

6. WATER REUSE SYSTEMS.

5.410.4.3 PROCEDURES. PERFORM TESTING AND ADJUSTING PROCEDURES IN ACCORDANCE WITH MANUFACTURER'S SPECIFICATIONS AND APPLICABLE STANDARDS ON EACH SYSTEM.

5.410.4.3.1 HVAC BALANCING. IN ADDITION TO TESTING AND ADJUSTING, BEFORE A NEW SPACE-CONDITIONING SYSTEM SERVING A BUILDING OR SPACE IS OPERATED FOR NORMAL USE. THE SYSTEM SHALL BE BALANCED IN ACCORDANCE WITH THE PROCEDURES DEFINED BY THE TESTING ADJUSTING AND BALANCING BUREAU NATIONAL STANDARDS; THE NATIONAL ENVIRONMENTAL BALANCING BUREAU PROCEDURAL STANDARDS: ASSOCIATED AIR BALANCE COUNCIL NATIONAL STANDARDS OR AS APPROVED BY THE ENFORCING AGENCY.

5.410.4.4 REPORTING. AFTER COMPLETION OF TESTING, ADJUSTING AND BALANCING, PROVIDE A FINAL REPORT OF TESTING SIGNED BY THE INDIVIDUAL RESPONSIBLE FOR PERFORMING THESE SERVICES.

5.410.4.5 OPERATION AND MAINTENANCE (O & M) MANUAL. PROVIDE THE BUILDING OWNER OR REPRESENTATIVE WITH DETAILED OPERATING AND MAINTENANCE INSTRUCTIONS AND COPIES OF GUARANTIES/WARRANTIES FOR EACH SYSTEM. O & M INSTRUCTIONS SHALL BE CONSISTENT WITH OSHA REQUIREMENTS IN CCR, TITLE 8, SECTION 5142, AND OTHER RELATED REGULATIONS.

> 5.410.4.5.1 INSPECTIONS AND REPORTS. INCLUDE A COPY OF ALL INSPECTION VERIFICATIONS AND REPORTS REQUIRED BY THE ENFORCING AGENCY.

DIVISION 5.5 ENVIRONMENTAL QUALITY SECTION 5.501 GENERAL

5.501.1 SCOPE. THE PROVISIONS OF THIS CHAPTER SHALL OUTLINE MEANS OF REDUCING THE QUANTITY OF AIR CONTAMINANTS THAT ARE ODOROUS, IRRITATING, AND/OR HARMFUL TO THE COMFORT AND WELL-BEING OF A BUILDING'S INSTALLERS, OCCUPANTS AND NEIGHBORS.

SECTION 5.502 DEFINITIONS

5.502.1 DEFINITIONS. THE FOLLOWING TERMS ARE DEFINED IN CHAPTER 2 (AND ARE INCLUDED HERE

ARTERIAL HIGHWAY. A GENERAL TERM DENOTING A HIGHWAY PRIMARILY FOR THROUGH TRAFFIC USUALLY ON A CONTINUOUS ROUTE.

A-WEIGHTED SOUND LEVEL (DBA). THE SOUND PRESSURE LEVEL IN DECIBELS AS MEASURED ON A SOUND LEVEL METER USING THE INTERNATIONALLY STANDARDIZED A-WEIGHTING FILTER OR AS COMPUTED FROM SOUND SPECTRAL DATA TO WHICH A-WEIGHTING ADJUSTMENTS HAVE BEEN MADE.

1 BTU/HOUR, BRITISH THERMAL UNITS PER HOUR, ALSO REFERRED TO AS BTU, THE AMOUNT OF HEAT

REQUIRED TO RAISE ONE POUND OF WATER ONE DEGREE FAHRENHEIT PER HOUR, A COMMON MEASURE OF HEAT TRANSFER RATE. A TON OF REFRIGERATION IS 12,000 BTU, THE AMOUNT OF HEAT REQUIRED TO MELT A TON (2,000 POUNDS) OF ICE AT 32° FAHRENHEIT.

COMMUNITY NOISE EQUIVALENT LEVEL (CNEL). A METRIC SIMILAR TO THE DAY-NIGHT AVERAGE SOUND LEVEL (LDN), EXCEPT THAT A 5 DECIBEL ADJUSTMENT IS ADDED TO THE EQUIVALENT CONTINUOUS SOUND EXPOSURE LEVEL FOR EVENING HOURS (7PM TO 10PM) IN ADDITION TO THE 10 DB NIGHTTIME ADJUSTMENT USED IN THE LDN.

COMPOSITE WOOD PRODUCTS. COMPOSITE WOOD PRODUCTS INCLUDE HARDWOOD PLYWOOD, PARTICLEBOARD AND MEDIUM DENSITY FIBERBOARD. "COMPOSITE WOOD PRODUCTS" DOES NOT INCLUDE HARDBOARD, STRUCTURAL PLYWOOD, STRUCTURAL PANELS, STRUCTURAL COMPOSITE LUMBER, ORIENTED STRAND BOARD, GLUED LAMINATED TIMBER, TIMBER, PREFABRICATED WOOD I-JOISTS OR FINGER-JOINTED LUMBER, ALL AS SPECIFIED IN CALIFORNIA CODE OF REGULATIONS (CCR). TITLE 17, SECTION 93120.1(A).

NOTE: SEE CCR, TITLE 17, SECTION 93120.1.

DAY-NIGHT AVERAGE SOUND LEVEL (LDN). THE A-WEIGHTED EQUIVALENT CONTINUOUS SOUND EXPOSURE LEVEL FOR A 24-HOUR PERIOD WITH A 10 DB ADJUSTMENT ADDED TO SOUND LEVELS OCCURRING DURING NIGHTTIME HOURS (10P.M. TO 7 A.M.).

DECIBEL (DB). A MEASURE ON A LOGARITHMIC SCALE OF THE MAGNITUDE OF A PARTICULAR QUANTITY (SUCH AS SOUND PRESSURE, SOUND POWER, SOUND INTENSITY) WITH RESPECT TO A REFERENCE

ELECTRIC VEHICLE (EV). AN AUTOMOTIVE-TYPE VEHICLE FOR ON-ROAD USE, SUCH AS PASSENGER AUTOMOBILES, BUSES, TRUCKS, VANS, NEIGHBORHOOD ELECTRIC VEHICLES, ELECTRIC MOTORCYCLES, AND THE LIKE, PRIMARILY POWERED BY AN ELECTRIC MOTOR THAT DRAWS CURRENT FROM A RECHARGEABLE STORAGE BATTERY, FUEL CELL, PHOTOVOLTAIC ARRAY, OR OTHER SOURCE OF ELECTRIC CURRENT. PLUG-IN HYBRID ELECTRIC VEHICLES (PHEV) ARE CONSIDERED ELECTRIC VEHICLES. FOR PURPOSES OF THE CALIFORNIA ELECTRICAL CODE, OFF-ROAD, SELF-PROPOELLED ELECTRIC VEHICLES, SUCH AS INDUSTRIAL TRUCKS, HOISTS, LIFTS, TRANSPORTS, GOLF CARTS, AIRLINE GROUND SUPPORT EQUIPMENT, TRACTORS, BOATS, AND THE LIKE, ARE NOT INCLUDED.

SECTION 5.502 DEFINITIONS (CONT)

REQUIRED

ELECTRIC VEHICLE CHARGING STATION(S) (EVCSJ). ONE OR MORE SPACES INTENDED FOR CHARGING

ELECTRIC VEHICLE SUPPLY EQUIPMENT (EVSE). THE CONDUCTORS, INCLUDING THE UNGROUNDED. GROUNDED, AND EQUIPMENT GROUNDING CONDUCTORS AND THE ELECTRIC VEHICLE CONNECTORS. ATTACHMENT PLUGS, AND ALL OTHER FITTINGS, DEVICES, POWER OUTLETS, OR APPARATUS INSTALLED SPECIFICALLY FOR THE PURPOSE OF TRANSFERRING ENERGY BETWEEN THE PREMISES WIRING AND THE ELECTRIC VEHICLE.

ENERGY EQUIVALENT (NOISE) LEVEL (LEQ). THE LEVEL OF A STEADY NOISE WHICH WOULD HAVE THE SAME ENERGY AS THE FLUCTUATING NOISE LEVEL INTEGRATED OVER THE TIME OF PERIOD OF

EXPRESSWAY, AN ARTERIAL HIGHWAY FOR THROUGH TRAFFIC WHICH MAY HAVE PARTIAL CONTROL OF ACCESS, BUT WHICH MAY OR MAY NOT BE DIVIDED OR HAVE GRADE SEPARATIONS AT INTERSECTIONS.

FREEWAY. A DIVIDED ARTERIAL HIGHWAY WITH FULL CONTROL OF ACCESS AND WITH GRADE

PERIOD OF TIME. CARBON DIOXIDE IS THE REFERENCE COMPOUND WITH A GWP OF ONE.

SEPARATIONS AT INTERSECTIONS. GLOBAL WARMING POTENTIAL (GWP). THE RADIATIVE FORCING IMPACT OF ONE MASS-BASED UNIT OF A GIVEN GREENHOUSE GAS RELATIVE TO AN EQUIVALENT UNIT OF CARBON DIOXIDE OVER A GIVEN

GLOBAL WARMING POTENTIAL VALUE (GWP VALUE). A 100-YEAR GWP VALUE PUBLISHED BY THE INTERGOVERNMENTAL PANEL ON CLIMATE CHANGE (IPCC) IN EITHER ITS SECOND ASSESSMENT REPORT (SAR) (IPCC, 1995); OR ITS FOURTH ASSESSMENT A-3 REPORT (AR4) (IPCC, 2007). THE SAR GWP VALUES ARE FOUND IN COLUMN "SAR (100-YR)" OF TABLE 2.14.; THE AR4 GWP VALUES ARE FOUND IN COLUMN "100 YR" OF TABLE 2.14.

HIGH-GWP REFRIGERANT. A COMPOUND USED AS A HEAT TRANSFER FLUID OR GAS THAT IS: (A) A CHI OROFI UOROCARBON, A HDROCHI OROFI UOROCARBON, A HYDROFI UOROCARBON, A PERFLUOROCARBON, OR ANY COMPOUND OR BLEND OF COMPOUNDS, WITH A GWP VALUE EQUAL TO OR GREATER THAN 150, OR (B) ANY OZONE DEPLETING SUBSTANCE AS DEFINED IN TITLE 40 OF THE CODE OF FEDERAL REGULATIONS, PART 82, SEC.82.3 (AS AMENDED MARCH 10, 2009).

LONG RADIUS ELBOW. PIPE FITTING INSTALLED BETWEEN TWO LENGTHS OF PIPE OR TUBING TO ALLOW A CHANGE OF DIRECTION. WITH A RADIUS 1.5 TIMES THE PIPE DIAMETER.

LOW-GWP REFRIGERANT. A COMPOUND USED AS A HEAT TRANSFER FLUID OR GAS THAT: (A) HAS A GWP VALUE LESS THAN 150, AND (B) IS NOT AN OZONE DEPLETING SUBSTANCE AS DEFINED IN TITLE 40 OF THE CODE OF FEDERAL REGULATIONS, PART 82, SEC.82.3 (AS AMENDED MARCH 10, 2009).

MERV. FILTER MINIMUM EFFICIENCY REPORTING VALUE, BASED ON ASHRAE 52.2-1999.

MAXIMUM INCREMENTAL REACTIVITY (MIR). THE MAXIMUM CHANGE IN WEIGHT OF OZONE FORMED BY ADDING A COMPOUND TO THE "BASE REACTIVE ORGANIC GAS (ROG) MIXTURE" PER WEIGHT OF COMPOUND ADDED, EXPRESSED TO HUNDRETHS OF A GRAM (G O³/G ROC).

PRODUCT-WEIGHTED MIR (PWMIR). THE SUM OF ALL WEIGHTED-MIR FOR ALL INGREDIENTS IN A PRODUCT SUBJECT TO THIS ARTICLE. THE PWMIR IS THE TOTAL PRODUCT REACTIVITY EXPRESSED TO HUNDREDTHS OF A GRAM OF OZONE FORMED PER GRAM OF PRODUCT (EXCLUDING CONTAINER AND PACKAGING).

PSIG. POUNDS PER SQUARE INCH, GUAGE.

REACTIVE ORGANIC COMPOUND (ROC). ANY COMPOUND THAT HAS THE POTENTIAL, ONCE EMITTED, TO CONTRIBUTE TO OZONE FORMATION IN THE TROPOSPHERE.

SCHRADER ACCESS VALVES. ACCESS FITTINGS WITH A VALVE CORE INSTALLED.

SHORT RADIUS ELBOW. PIPE FITTING INSTALLED BETWEEN TWO LENGTHS OF PIPE OR TUBING TO ALLOW A CHANGE OF DIRECTION, WITH A RADIUS 1.0 TIMES THE PIPE DIAMETER.

SUPERMARKET. FOR THE PURPOSES OF SECTION 5.508.2, A SUPERMARKET IS ANY RETAIL FOOD FACILITY WITH 8,000 SQUARE FEET OR MORE CONDITIONED AREA, AND THAT UTILIZES EITHER REFRIGERATED DISPLAY CASES, OR WALK-IN COOLERS OR FREEZERS CONNECTED TO REMOTE COMPRESSOR UNITS OR CONDENSING UNITS.

VOC. A VOLATILE ORGANIC COMPOUND BROADLY DEFINED AS A CHEMICAL COMPOUND BASED ON CARBON CHAINS OR RINGS WITH VAPOR PRESSURES GREATER THAN 0.1 MILLIMETERS OF MERCURY AT ROOM TEMPERATURE. THESE COMPOUNDS TYPICALLY CONTAIN HYDROGEN AND MAY CONTAIN OXYGEN, NITROGEN AND OTHER ELEMENTS. SEE CCR TITLE 17, SECTION 94508(A

NOTE: WHERE SPECIFIC REGULATIONS ARE CITED FROM DIFFERENT AGENCIES SUCH AS SCAQMD, ARE ETC., THE VOC DEFINITION INCLUDED IN THAT SPECIFIC REGULATION IS THE ONE THAT PREVAILS FOR THE SPECIFIC MEASURE IN QUESTION.

SECTION 5.503 FIREPLACES

5.503.1 FIREPLACES. INSTALL ONLY A DIRECT-VENT SEALED-COMBUSTION GAS OR SEALED WOOD-BURNING FIREPLACE, OR A SEALED WOODSTOVE OR PELLET STOVE, AND REFER TO RESIDENTIAL REQUIREMENTS IN THE CALIFORNIA ENERGY CODE. TITLE 24, PART 6, SUBCHAPTER 7, SECTION 150. WOODSTOVES. PELLET STOVES AND FIREPLACES SHALL COMPLY WITH APPLICABLE LOCAL ORDINANCES.

5.503.1.1 WOODSTOVES. WOODSTOVES AND PELLET STOVES SHALL COMPLY WITH U.S. EPA NEW SOURCE PERFORMANCE STANDARDS (NSPS) EMISSION LIMITS AS APPLICABLE, AND SHALL HAVE A PERMANENT LABEL INDICATING THEY ARE CERTIFIED TO MEET THE EMISSION LIMITS.

SECTION 5.504 POLLUTANT CONTROL 5.504.1 TEMPORARY VENTILATION. THE PERMANENT HVAC SYSTEM SHALL ONLY BE USED DURING CONSTRUCTION IF NECESSARY TO CONDITION THE BUILDING OR AREAS OF ADDITION OR ALTERATION WITHIN THE REQUIRED TEMPERATURE RANGE FOR MATERIAL AND EQUIPMENT INSTALLATION. IF THE HVAC SYSTEM IS USED DURING CONSTRUCTION, USE RETURN AIR FILTERS WITH A MINIMUM EFFICIENC' REPORTING VALUE (MERV) OF 8. BASED ON ASHRAE 52.2-1999, OR AN AVERAGE EFFICIENCY OF 30% BASED ON ASHRAE 52.1-1992 REPLACE ALL FILTERS IMMEDIATELY PRIOR TO OCCUPANCY, OR, IF THE BUILDING IS OCCUPIED DURING ALTERATION, AT THE CONCLUSION OF CONSTRUCTION.

5.504.3 COVERING OF DUCT OPENINGS AND PROTECTION OF MECHANICAL EQUIPMENT DURING CONSTRUCTION. AT THE TIME OF ROUGH INSTALLATION, OR DURING STORAGE ON THE CONSTRUCTION SITE AND UNTIL FINAL STARTUP OF THE HEATING, COOLING AND VENTILATING EQUIPMENT, ALL DUCT AND OTHER RELATED AIR DISTRIBUTION COMPONENT OPENINGS SHALL BE COVERED WITH TAPE, PLASTIC, SHEET METAL OR OTHER METHODS ACCEPTABLE TO THE ENFORCING AGENCY TO REDUCE THE AMOUNT OF DUST, WATER AND DEBRIS WHICH MAY COLLECT IN THE SYSTEM.

PROVIDE GRID STRAINER, P-TRAP, SUPPLIES, AND ANGLE STOPS W/ LOOSE KEY. INSTALL PER ACCESSIBILITY REQUIREMENTS.
* <u>DF-1</u>	DRINKING FOUNTAIN: DUAL HEIGHT, WALL-MOUNTED, PUSH BUTTON, FREEZE-RESISTANT, LIGHT GRAY GRANITE COLOR, ELKAY #EZSTL8LC OR EQUAL. PROVIDE ALL NECESSARY HARDWARE. INSTALL PER ACCESSIBILITY REQUIREMENTS.
<u>MS-1</u>	MOP SINK: FLOOR MOUNT, MOLDED STONE, 24" x 24", WHITE, 3" OUTLET, FLORESTONE #MSR-2424. VINYL RIM GUARD: FIAT: E-77-AA. FAUCET: ROUGH CHROME FINISH, EXPOSED YOKE FAUCET, VACUUM BREAKER, WALL BRACE, 3/4" HOSE THREAD OUTLET, INTEGRAL STOPS, CHICAGO #897-RCF. PROVIDE WITH MOP HANGER AND 4' LONG 3/4"ø FILL HOSE.
<u>FD-1</u>	FLOOR DRAIN: CAST IRON BODY, CLAMPING COLLAR, NICKEL-BRONZE STRAINER, TRAP PRIMER CONNECTION, ZURN #ZN415B.
* INDIC	ATES ADA/HCP COMPLIANT FIXTURE.

	PLUMBING EQUIPMENT SCHEDULE
MARK	DESCRIPTION
<u>WH-1</u>	ELECTRIC WATER HEATER: 30 GALLON STORAGE, INSULATED TANK, 16 GALLONS RECOVERY @ 100°F RISE, T&P RELIEF VALVE, TEMPERATURE = 120°,120V WITH (2) NON-SIMULTANEOUS 4kW ELEMENTS, OPERATING WEIGHT = 369 LBS, A.O. SMITH #DEL 30.
<u>CP-1</u>	CIRCULATION PUMP: LEAD-FREE BRONZE BODY, POLYPROPELENE IMPELLER, CERAMIC SHAFT, 3/4" FLANGE CONNECTIONS, 10 GPM @ 8'/HD, 115V/1ø, 125 WATTS @ 0.80 FLA, OP WT = 13.1 LBS. PROVIDE WITH OPTIONAL AUTOMATIC TIMER KIT AND AQUASTAT. <u>BELL & GOSSETT #NBF-22</u> .
<u>ET-1</u>	EXPANSION TANK: 4.4 GALLON TANK VOLUME, 3.2 GALLON ACCEPTANCE VOLUME, BUTYL DIAPHRAGM BLADDER, MAX OPERATING TEMP = 200°F, MAX WORKING PRESSURE = 150 PSI, FACTORY PRE-CHARGED TO 50 PSI, DIM = 11" DIAMETER x 15" LONG, WEIGHT = 9 LBS, AMTROL "THERM-X-TROL" #ST-12.
\A/LI A 1	WATER HAMMER ARRESTOR: LEAD FREE, 1/2" BRASS MALE NPT, NITROGEN PRELOADED, PROVIDE SHUT-OFF VALVE,

PRECISION PLUMBING PRODUCTS #SC-500A

PLUMBING GENERAL NOTES

A COMPLETE DOMESTIC PLUMBING SYSTEM AS GENERALLY DELINEATED ON THE PLUMBING DRAWINGS, INCLUDING SERVICE PIPING AND FINAL CONNECTIONS TO EQUIPMENT FURNISHED AND INSTALLED BY OTHER TRADES AS MAY BE SHOWN ON THE ARCHITECTURAL, ELECTRICAL OR OTHER DRAWINGS OF THE CONTRACT DOCUMENTS.

CALIFORNIA CODE OF REGULATIONS: ALL HOT WATER DISTRIBUTION AND CIRCULATION LINES SHALL BE INSULATED IN ACCORDANCE WITH SECTION 120.3 OF THE CALIFORNIA CODE OF REGULATIONS, TITLE 24, PART 6,

SUBCHAPTER 3. ALL PLUMBING FIXTURES & EQUIPMENT USED (E.G. SHOWERHEADS, LAVATORY FAUCETS, SINK FAUCET AND WATER HEATERS) SHALL HAVE BEEN CERTIFIED TO THE CALIFORNIA ENERGY COMMISSION BY ITS MANUFACTURER TO COMPLY WITH THE EFFICIENCY STANDARDS FOR SUCH APPLIANCES.

CODES: ALL WORK, MATERIAL, AND EQUIPMENT SHALL BE FURNISHED AND INSTALLED IN COMPLIANCE WITH THE FOLLOWING CODES AS ADOPTED AND AMENDED BY THE INSPECTING AUTHORITY HAVING JURISDICTION. NOTHING IN THESE PLANS IS TO BE CONSTRUED TO PERMIT THE INSTALLATION OF WORK, MATERIAL OR EQUIPMENT NOT CONFORMING TO THESE OR OTHER

- A. 2019 CALIFORNIA ADMINISTRATIVE CODE (CAC) PART 1, TITLE 24, CALIFORNIA CODE OF
- B. 2019 CALIFORNIA BUILDING CODE (CBC) PART 2, TITLE 24, CCR BASED ON THE 2018
- INTERNATIONAL BUILDING CODE (IBC) C. 2019 CALIFORNIA ELECTRICAL CODE (CEC) PART 3, TITLE 24, CCR BASED ON THE 2018 NATIONAL ELECTRICAL CODE (NEC)
- D. 2019 CALIFORNIA MECHANICAL CODE (CMC) PART 4, TITLE 24, CCR BASED ON THE 2018
- UNIFORM MECHANICAL CODE (UMC) E. 2019 CALIFORNIA PLUMBING CODE (CPC) PART 5, TITLE 24, CCR BASED ON THE 2018 UNIFORM PLUMBING CODE (UPC)
- F. 2019 CALIFORNIA ENERGY CODE (CEC) PART 6, TITLE 24 CCR.
- G. 2019 CALIFORNIA FIRE CODE (CFC) PART 9, TITLE 24, CCR BASED ON THE 2018 INTERNATIONAL FIRE CODE (IFC)
- H. 2019 CALIFORNIA GREEN BUILDING STANDARDS (CGBSC) PART 11, TITLE 24, CCR

5. WORKMANSHIP: ALL WORK SHALL BE DONE IN A NEAT AND WORKMANLIKE MANNER ACCORDING TO THE BEST TRADE PRACTICE BY THOSE SKILLED IN THE PARTICULAR TRADE. EQUIPMENT, FIXTURES, PIPING, ETC., SHALL BE PLUMB, LEVEL, SQUARE AND/OR CENTERED, ETC. EQUIPMENT TO BE INSTALLED IN STRICT COMPLIANCE WITH MANUFACTURER'S RECOMMENDATIONS.

EXISTING INFORMATION: LOCATION, SIZE, ELEVATION, MATERIAL, ETC., OF EXISTING UTILITIES IS PROVIDED FROM SOURCES DEEMED RELIABLE BUT IS NOT GUARANTEED. THE CONTRACTOR SHALL FIELD VERIFY ALL DATA BEFORE PROCEEDING WITH ANY WORK. NO EXTRA COST WILL BE ALLOWED FOR SERVICES NOT AS SHOWN.

PERMITS AND UTILITY SERVICE FEES:

CODES APPLICABLE TO THIS PROJECT.

THE PLUMBING CONTRACTOR SHALL ARRANGE AND PAY FOR ALL PERMITS, INSPECTIONS, AND SERVICE CHARGES REQUIRED FOR THE INSTALLATION OF THE WORK.

PLANS ARE DIAGRAMMATIC. THE CONTRACTOR SHALL CONFIRM ALL DIMENSIONS AND LOCATION OF WALLS, PARTITIONS, FIXTURES, ETC., AGAINST DESIGN PLANS FOR CONSISTENCY AND ACCURACY PRIOR TO COMMENCING WORK.

PROVIDE AND INSTALL CONDENSATE DRAIN WITH TRAP AT EACH A/C UNIT PER THE UPC. AT LOCATIONS SHOWN ON DRAWINGS. COORDINATE WITH MECHANICAL CONTRACTOR.

10. PROVIDE AND INSTALL ACCESS PANELS FOR ALL SHUT-OFF, ISOLATION, OR BRANCH VALVES NOT READILY ACCESSIBLE. ACCESS PANELS SHALL BE PROVIDED AND INSTALLED AT ALL TRAP PRIMER VALVES AND WATER HAMMER ARRESTORS.

11. ALL PIPING PASSING THROUGH CONCRETE FLOORS SHALL BE SLEEVED TO PROTECT PIPING 12. HORIZONTAL DRAINAGE PIPING LESS THAN 4" IN DIAMETER SHALL BE SLOPED AT A MINIMUM OF

1/4" PER FOOT (2%) DRAINAGE PIPING 4" AND LARGER SHALL BE SLOPED AT A MINIMUM OF 1/4" PER FOOT (2%) UNLESS OTHERWISE APPROVED BY THE AHJ.

13. ALL PLUMBING FIXTURES AND PIPING SHALL BE LISTED BY AN APPROVED LISTING AND TESTING AGENCY AND PROPERLY LABELED.

14. ALL PIPES SHALL BE LABELED WITH CLASSIFICATION, COLOR SCHEME, AND SIZING PER ANSI STANDARD A13.1.

DEMOLITION NOTES

- THE CONTRACTOR SHALL VISIT THE PROJECT SITE AND MAKE HIMSELF AWARE OF ALL EXISTING CONDITIONS WHICH CAN BE OBSERVED. ADDITIONAL COSTS WILL NOT BE ALLOWED FOR CORRECTION OF ITEMS WHICH CAN BE OBSERVED AND THEREFORE SHOULD BE INCLUDED IN HIS BID. THE CONTRACTOR IS RESPONSIBLE FOR ALL DEMOLITION WORK REQUIRED TO COMPLETE THIS PROPOSED PROJECT.
- THE NOTES AND DRAWINGS CONTAINED ON THIS SHEET DESCRIBE IN A GENERAL SENSE THE EXTENT OF ITEMS TO BE MODIFIED, REMOVED OR INSTALLED. THIS DESCRIPTION DOES NOT NECESSARILY INCLUDE A DESCRIPTION OF ITEMS TO BE REPAIRED OR REFINISHED AS A RESULT OF THIS REMOVAL OR MODIFICATION. IN THE ABSENCE OF ANY SPECIFIC DIRECTION, THE CONTRACTOR SHALL REPAIR THE AFFECTED AREA(S) TO A CONDITION EQUAL TO THE ADJACENT AREA(S) AND/OR SIMILAR EXISTING CONDITIONS ON PROJECT.
- THE CONTRACTOR SHALL PROVIDE DUST AND DEBRIS CONTROL THROUGHOUT THE PROJECT'S CONSTRUCTION. THE CONTRACTOR SHALL COORDINATE HIS WORK WITH THE BUILDING OWNER TO PROVIDE THE LEAST INTERRUPTION OF EXISTING BUILDING OPERATIONS. COORDINATE WITH THE OWNER THE LOCATION OF ON-SITE STORAGE AND STAGING.
- 4. NOT ALL REQUIRED PATCHING AND/OR REPAIRS ARE SPECIFICALLY NOTED ON THIS PLAN.
- 5. COORDINATE DEMOLITION WORK WITH NEW PROPOSED FLOOR PLANS. 6. CONTRACTOR SHALL DISCARD AND DISPOSE OF ALL DEMOLISHED ITEMS.

TRAP PRIMER

7. EXISTING PIPING AND ELECTRICAL OR COMMUNICATION CONDUITS WHICH INTERFERE WITH THE WORK SHALL BE RE-ROUTED BY THE CONTRACTOR.

Economic and Market Update

Data as of July 31, 2022

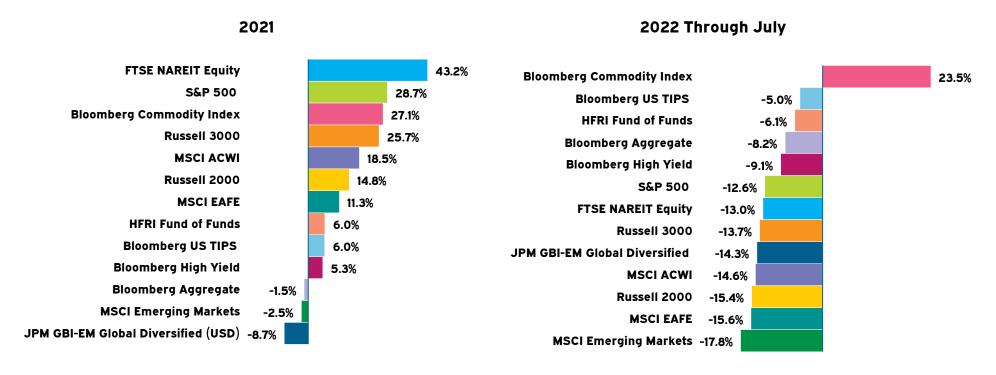

Commentary

- → Global markets posted strong results in July on expectations that policy tightening in the US could end early next year due to slowing growth.
 - As expected, the Federal Reserve increased interest rates by another 75 basis points. Notably, much focus was placed on chair Jerome Powell's comments that the pace of policy tightening could slow.
 - Developed market equity indices increased for the month, led by US equities where earnings reports were not
 as weak as feared. Emerging markets fell for the month driven by China instituting renewed COVID-19
 lockdowns and lingering property market issues.
 - Growth stocks again outperformed value stocks in July, but trail significantly year to date.
 - Rates declined for the month as growth slowed and expectations for the pace of policy tightening moderated.
- → Persistently high inflation and the expected policy response, the war in Ukraine, lingering COVID-19 issues, and lockdowns in China will all have considerable economic and financial consequences for the global economy.

Index Returns¹

- → Outside of emerging markets and the broad US investment grade bond market (Bloomberg Aggregate), most asset classes appreciated in 2021.
- → While year-to-date returns remain negative, in July most asset classes posted positive returns reflecting an improvement in sentiment related to cooling inflationary pressures and the expected path of policy.

Domestic Equity Returns¹

Domestic Equity	July (%)	Q 2 (%)	YTD (%)	1 YR (%)	3 YR (%)	5 YR (%)	10 YR (%)
S&P 500	9.2	-16.1	-12.6	-4.6	13.4	12.8	13.8
Russell 3000	9.4	-16.7	-13.7	-7.4	12.6	12.2	13.5
Russell 1000	9.3	-16.7	-13.6	-6.9	12.9	12.5	13.7
Russell 1000 Growth	12.0	-20.9	-19.4	-11.9	16.1	16.3	16.0
Russell 1000 Value	6.6	-12.2	-7.1	-1.4	8.9	8.3	11.1
Russell MidCap	9.9	-16.8	-13.8	-9.8	9.5	9.7	12.3
Russell MidCap Growth	12.2	-21.1	-22.6	-21.8	7.5	11.0	12.8
Russell MidCap Value	8.6	-14.7	-9.0	-2.9	9.4	7.7	11.5
Russell 2000	10.4	-17.2	-15.4	-14.3	7.5	7.1	10.6
Russell 2000 Growth	11.2	-19.3	-21.6	-23.2	4.7	6.9	10.7
Russell 2000 Value	9.7	-15.3	-9.3	-4.8	9.5	6.7	10.2

US Equities: Russell 3000 Index rose 9.4%, and growth indices continued to outperform value in July.

- → US stocks rose sharply during the month, led by the technology and consumer discretionary sectors.
- → Growth indices outperformed their value counterparts for the month but remain well behind for the year-to-date period.
- → Small company stocks outperformed large company stocks in July by over 100 basis points but remain behind year-to-date.

¹ Source: Bloomberg. Data is as of July 31, 2022.

Foreign Equity Returns¹

Foreign Equity	July (%)	Q2 (%)	YTD (%)	1 YR (%)	3 YR (%)	5 YR (%)	10 YR (%)
MSCI ACWI ex. US	3.4	-13.7	-15.6	-15.3	2.9	2.4	5.0
MSCI EAFE	5.0	-14.5	-15.6	-14.3	3.2	2.6	5.8
MSCI EAFE (Local Currency)	5.2	-7.8	-6.7	-2.1	5.9	5.2	8.7
MSCI EAFE Small Cap	6.6	-17.7	-19.7	-20.3	3.6	2.3	7.8
MSCI Emerging Markets	-0.2	-11.5	-17.8	-20.1	0.9	1.0	2.8
MSCI Emerging Markets (Local Currency)	0.1	-8.1	-13.6	-14.9	3.6	3.4	5.8
MSCI China	-9.5	3.4	-19.7	-28.3	-3.6	-1.6	4.3

International equities (MSCI EAFE) gained 5.0%, while emerging markets (MSCI EM) fell 0.2% in July.

- → Non-US developed market stocks trailed the US for the month, and emerging markets stocks posted negative returns due to China's drawdown of 9.5%. Both remain notably negative for the year-to-date period (EAFE -15.6%, EM -17.8%), lagging US equities.
- → The war in Ukraine, high inflation and the likely monetary policy response, and slowing growth continue to weigh on sentiment.
- → Growth stocks had a strong month in July, outperforming value stocks across developed and emerging markets, similar to the US.

Fixed Income Returns¹

							Current		
Fixed Income	July (%)	Q2 (%)	YTD (%)	1 YR (%)	3 YR (%)	5 YR (%)	10 YR (%)	Yield (%)	Duration (Years)
Bloomberg Universal	2.5	-5.1	-8.7	-9.6	-0.2	1.3	1.9	3.9	6.4
Bloomberg Aggregate	2.4	-4.7	-8.2	-9.1	-0.2	1.3	1.6	3.4	6.6
Bloomberg US TIPS	4.4	-6.1	-5.0	-3.6	4.4	4.0	2.0	3.0	7.4
Bloomberg High Yield	5.9	-9.8	-9.1	-8.0	2.0	3.1	4.9	7.7	4.7
JPM GBI-EM Global Diversified (USD)	0.3	-8.6	-14.3	-18.7	-6.0	-2.7	-1.7	7.3	5.0

Fixed Income: The Bloomberg Universal gained 2.5% in July.

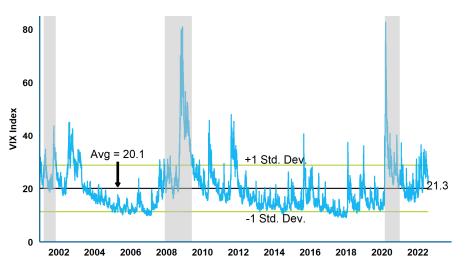

- → Fixed income indices broadly benefited from yields declining across the curve. During July, the US 10-year Treasury note yield fell 36 basis points, from 3.01% on June 30th to 2.65% on July 31.
- → The high yield index was one of the best performers in July as yields declined along with tightening spreads supported by a historic drop in high yield issuance to the lowest July issuance since 2006.

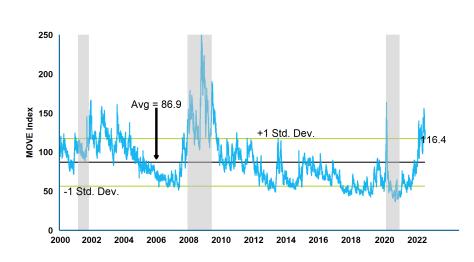

MEKETA INVESTMENT GROUP Page 8 of 47

¹ Source: Bloomberg. JPM GBI-EM is from InvestorForce. Data is as of July 31, 2022.

Equity and Fixed Income Volatility¹

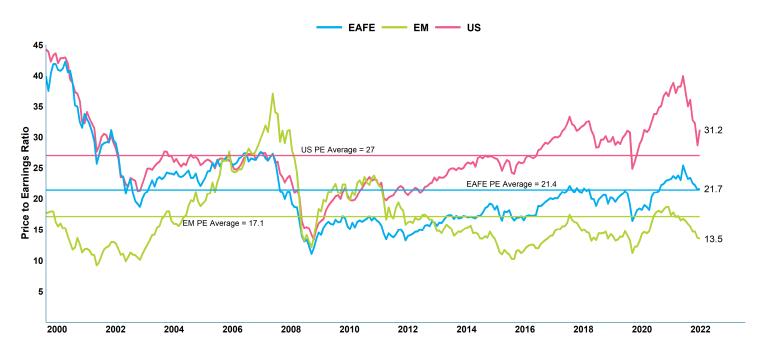

- → Volatility in equities (VIX) and fixed income (MOVE) declined in July based on potentially peaking monetary policy and possible rate cuts in 2023.
- → Despite the July decline, fixed income volatility remains high due to the uncertain path of short-term interest rates.

MEKETA INVESTMENT GROUP Page 9 of 47

¹ Equity and Fixed Income Volatility – Source: Bloomberg. Implied volatility as measured using VIX Index for equity markets and the MOVE Index to measure interest rate volatility for fixed income markets. Data is as of July 2022. The average line indicated is the average of the VIX and MOVE values between January 2000 and the recent month-end respectively.

Equity Cyclically Adjusted P/E Ratios¹

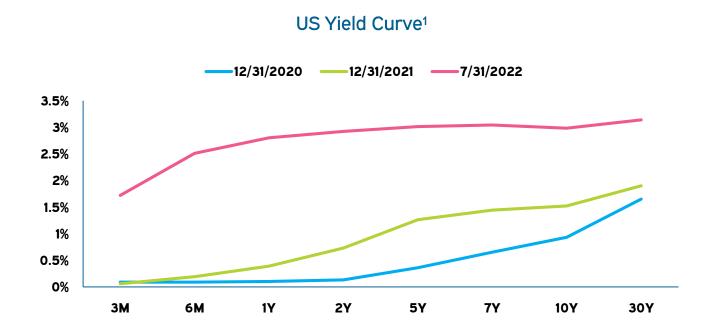

- → Strong positive results in July for US equities reversed the recent trend of valuation declines, but they remain well off the peak.
- → International developed market valuations remain below the US and are slightly above their own long-term average, with those for emerging markets the lowest and under the long-term average.

MEKETA INVESTMENT GROUP Page 10 of 47

¹ US Equity Cyclically Adjusted P/E on S&P 500 Index. Source: Robert Shiller, Yale University, and Meketa Investment Group. Developed and Emerging Market Equity (MSCI EAFE and EM Index) Cyclically Adjusted P/E – Source: MSCI and Bloomberg. Earnings figures represent the average of monthly "as reported" earnings over the previous ten years. Data is as of July 31, 2022. The average line is the long-term average of the US, EM, and EAFE PE values from December 1999 to the recent month-end respectively.

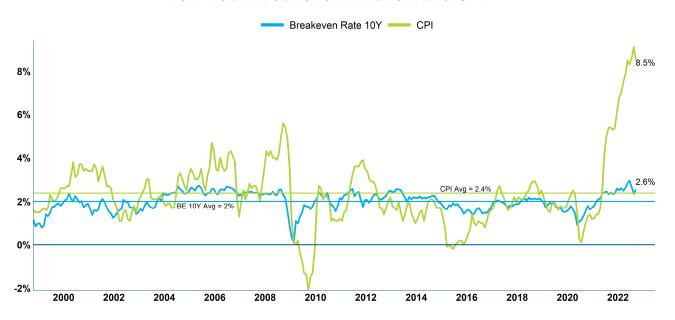

- → Rates across the yield curve remain much higher than at the start of the year.
- → In July, longer-dated yields declined as investors reconsidered economic growth prospects and the likelihood that yields have reached their peak for this economic cycle. Shorted dated yields rose on near-term policy actions and messaging that policy officials intend to remain aggressive in fighting inflation pressures into early 2023.
- → The yield spread between two-year and ten-year Treasuries became negative, finishing July at -0.23%. Inversions in the yield curve have historically often signaled building recessionary pressures.

¹ Source: Bloomberg. Data is as of July 31, 2022.

Ten-Year Breakeven Inflation and CPI¹

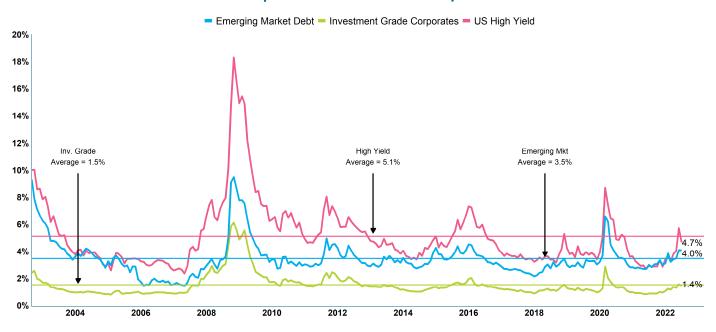

- → In July, inflation expectations (breakevens) rose on the prospects of easing monetary policy next year.
- → Trailing twelve-month CPI declined in July (8.5% versus 9.1%) and came in below expectations. Inflation levels in the US remain well above the long-term average of 2.4%.
- → Rising prices for energy (particularly oil), food, housing, and for new and used cars, remain key drivers of higher inflation.

MEKETA INVESTMENT GROUP Page 12 of 47

¹ Source: Bloomberg. Data is as of July 31, 2022. The CPI and 10 Year Breakeven average lines denote the average values from August 1998 to the present month-end respectively. Breakeven values represent month-end values for comparative purposes.

Credit Spreads vs. US Treasury Bonds¹

- → Credit spreads (the spread above a comparable maturity Treasury) declined in July, particularly for high yield, as risk appetite returned.
- → In the US, spreads for high yield reversed course, declining from 5.7% to 4.7%, while investment grade (1.6% to 1.4%) and emerging market (4.1% to 4.0%) spreads experienced more modest declines.

Global Economic Outlook

The IMF significantly lowered global growth forecasts again in their latest projections, driven by the economic impacts of persistent inflation in energy and food prices.

- → The IMF forecasts global GDP growth to come in at 3.2% in 2022 (0.4% below the prior estimate) and 2.9% in 2023 (0.7% below the prior estimate).
- → In advanced economies, GDP is projected to increase 2.5% in 2022 and 1.4% in 2023. The US saw another downgrade in the 2022 (2.3% versus 3.7%) and 2023 (1.0% versus 2.3%) growth forecasts largely due to policy tightening happening faster than previously expected given persistently high inflation. The euro area saw a downgrade too in expected growth (2.6% versus 2.8%) in 2022 and in 2023 (1.2% versus 2.3%) as rising energy prices particularly weigh on the region that is a net importer of energy. The Japanese economy is expected to grow 1.7% this year and next.
- → Growth projections for emerging markets are higher than developed markets, at 3.6% in 2022 and 3.9% in 2023. China's growth was downgraded for 2022 (3.3% versus 4.4%) and 2023 (4.9% versus 5.1%) given tight COVID-19 restrictions and continued property sector problems.
- \rightarrow The global inflation forecast was significantly increased for 2022 (7.4% versus 3.8%).

		Real GDP (%)1		Inflation (%)¹			
	IMF	IMF	Actual	IMF	IMF	Actual	
	2022 Forecast	2023 Forecast	10 Year Average	2022 Forecast	2023 Forecast	10 Year Average	
World	3.2	2.9	3.0	7.4	4.8	3.5	
Advanced Economies	2.5	1.4	1.6	5.7	2.5	1.5

MEKETA INVESTMENT GROUP Page 14 of 47

Global Nominal Gross Domestic Product (GDP) Growth¹

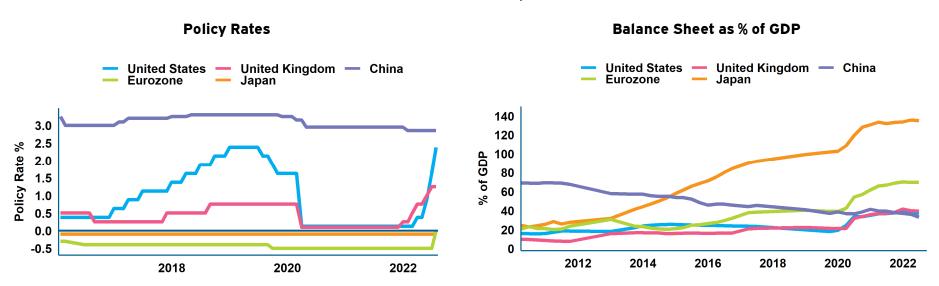

- → Global economies are expected to slow in 2022 compared to 2021 with risks of recession increasing given persistently high inflation and related tighter monetary policy.
- → Looking forward, the delicate balancing act of central banks trying to reduce inflation without dramatically impacting growth will remain key.

¹ Source: Oxford Economics (World GDP, US\$ prices & PPP exchange rate, nominal, % change YoY). Updated July 2022.

Central Bank Response¹

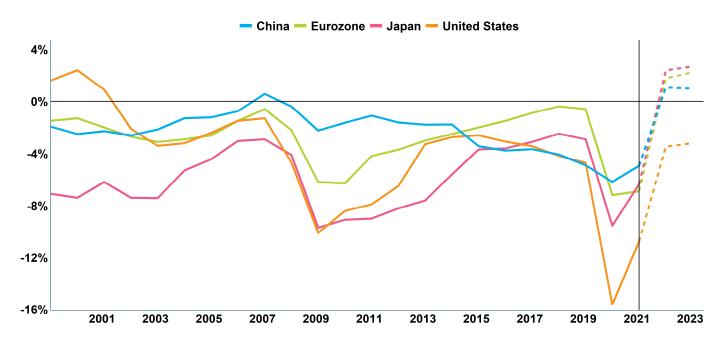

- → After global central banks took extraordinary action to support economies during the pandemic, including policy rate cuts and emergency stimulus through quantitative easing (QE), many are now aggressively reducing support in the face of high inflation.
- → The pace of withdrawing support varies across central banks with the US taking a more aggressive approach. The risk remains for a policy error, particularly overtightening, as record inflation, the war in Ukraine, and a tough COVID-19 policy in China could suppress global growth.
- → The one notable central bank outlier is China, where the central bank recently lowered rates and reserve requirements in response to slowing growth.

MEKETA INVESTMENT GROUP Page 16 of 47

¹ Source: Bloomberg. Policy rate data is as of July 31, 2022. China policy rate is defined as the medium-term lending facility 1 year interest rate. Balance sheet as % of GDP is based on quarterly data and is as of June 30, 2022.

Budget Surplus / Deficit as a Percentage of GDP¹

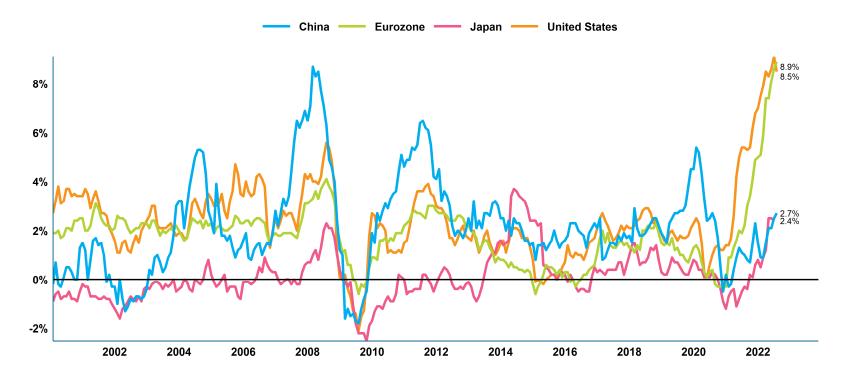

- → Budget deficits as a percentage of GDP drastically increased for major world economies, particularly the US, due to massive fiscal support and the severe economic contraction's effect on tax revenue in 2020 and 2021.
- → As fiscal stimulus programs end, and economic recoveries continue, deficits should improve in the coming years.

MEKETA INVESTMENT GROUP Page 17 of 47

¹ Source: Bloomberg. Data is as of July 31, 2022. Projections via IMF Forecasts from April 2022 Report. Dotted lines represent 2022 and 2023 forecasts.

Inflation (CPI Trailing Twelve Months)¹

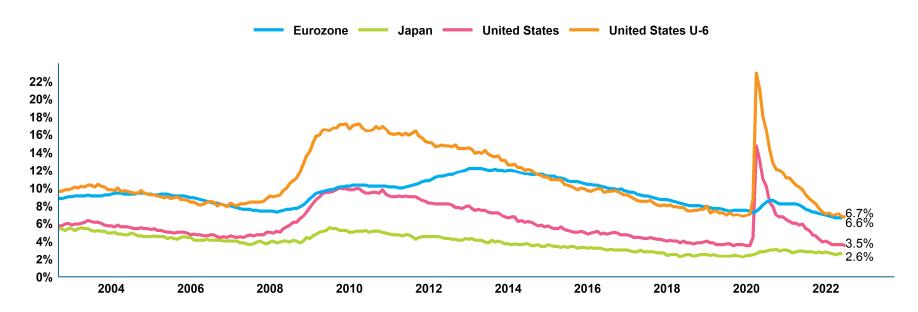

- → Inflation increased dramatically from the lows of the pandemic, particularly in the US and Eurozone where it has reached levels not seen in many decades.
- → Supply issues related to the pandemic, record monetary and fiscal stimulus, strict COVID-19 restrictions in China, and higher prices in many commodities driven by the war in Ukraine have been key global drivers of inflation.

¹ Source: Bloomberg. Data is as of July 2022. The most recent data for Japan is as of June 30, 2022.

Unemployment¹

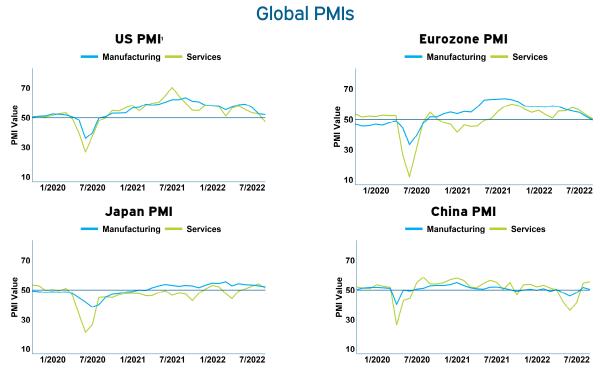

- → As economies have largely reopened, helped by vaccines for the virus, improvements have been seen in the labor market.
- → US unemployment, which experienced the steepest rise from the pandemic, declined back to pre-pandemic levels. The broader measure (U-6) that includes discouraged and underemployed workers declined but is much higher at 6.7%.

MEKETA INVESTMENT GROUP Page 19 of 47

¹ Source: Bloomberg. Data is as of July 2022, for the US. The most recent data for Eurozone and Japanese unemployment is as of June 30, 2022.

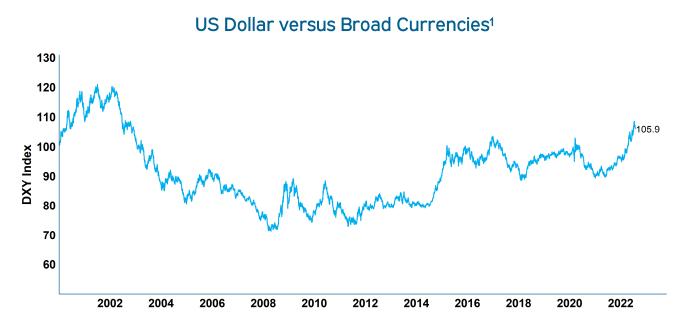

- → After improvements from the lows of the pandemic, Purchasing Managers Indices (PMI), based on surveys of private sector companies, have largely experienced some pressures recently.
- → Service sector PMIs in the US and Europe have recently declined, with the US slipping into contraction territory, while Japan experienced a decline for the month on rising COVID-19 cases in parts of the country. In China the services PMI remained in positive territory.
- → Manufacturing PMIs dropped recently across China and developed markets given declines in demand and inflationary pressures.

MEKETA INVESTMENT GROUP Page 20 of 47

¹ Source: Bloomberg. US Markit Services and Manufacturing PMI, Caixin Services and Manufacturing PMI, Eurozone Markit Services and Manufacturing PMI, Jibun Bank Services and Manufacturing PMI. Data is as of July 2022. Readings below 50 represent economic contractions.

- → In July, the US dollar overall continued its path higher but finished the month off its peak as expectations on the pace of policy tightening by the Fed fell and safe-haven flows declined.
- → The euro, yen, and yuan have all experienced significant declines versus the dollar this year, adding to inflation and slowing growth concerns.

¹ Source: Bloomberg. Data as of July 31, 2022.

Summary

Key Trends in 2022:

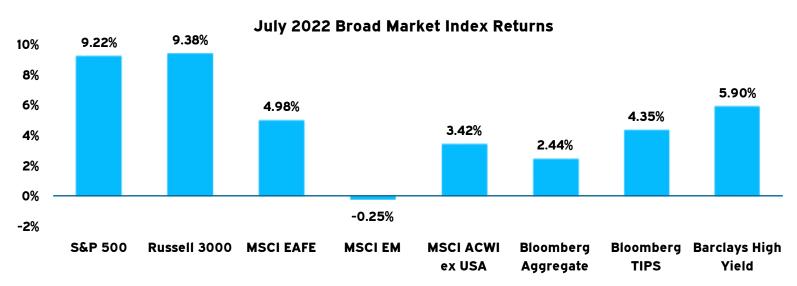

- → The impacts of record high inflation will remain key going forward, with volatility likely to remain high.
- → The war in Ukraine has created significant uncertainty, with a wide range of potential outcomes.
- → Expect growth to slow globally in 2022 to the long-term trend or below. Inflation, monetary policy, and the war will all be key.
- → The end of many fiscal programs is expected to put the burden of continued growth on consumers. Higher energy and food prices will depress consumers' spending in other areas.
- → Monetary policy will likely tighten globally but will remain relatively accommodative. The risk of overtightening policy remains.
- → Valuations have significantly declined in the US, approaching long-term averages.
- → Outside the US, equity valuations remain lower in both emerging and developed markets, but risks remain, including continued strength in the US dollar, higher inflation particularly weighing on Europe, and China maintaining its restrictive COVID-19 policies.

Performance Highlights As of July 31, 2022

Performance Highlights as of July 31, 2022

Market Review and Performance Summary for July 2022

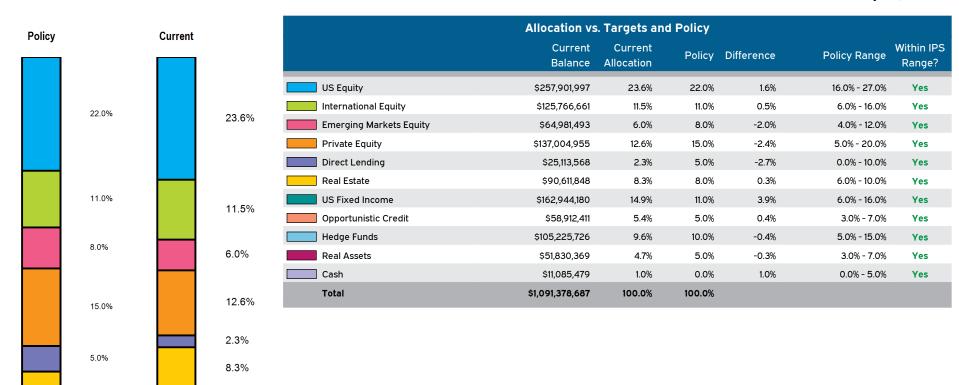

- → Most asset classes experienced a strong recovery in July as expectations of the Fed's policy tightening ending early next year grew. US equities saw the strongest returns as investors focused on comments from the Federal Reserve indicating policy tightening could be slowing. While International Developed saw strong returns, Emerging Markets fell due to reinstatement of COVID-19 policies in China. Fixed Income markets also benefited from declining yields during the month.
- → Merced CERA reported a monthly return of 3.4% net of fees. US Equities posted the strongest returns, driven by strong performance from both BNY Large Cap funds in the portfolio. Emerging Markets had strong performance on both absolute and relative basis as Artisan Developing World outperformed its benchmark by 7.2%. US Fixed Income mirrored its benchmark while Opportunistic Credit struggled relative to its benchmark primarily due to poor performance from the Sculptor Credit Opportunities fund.
- → As of July 31, 2022, total assets for the Merced CERA Portfolio are estimated at \$1.09 billion.

GoldenTree Multi-Sector Credit and Sculptor Credit Opportunities Domestic Partners market values are based on manager estimates.

Private Markets values are cash flow adjusted from preliminary 03/31/2022 NAVs.

Data prior to March 2018 provided by prior consultant.

Private Real Estate results prior to 1/1/2019 were included in the Real Assets composite. All results for the Private Real Estate composite that include the period prior to 1/1/2019 will reflect only the latest lineup of managers that Meketa received information for, therefore it may not reflect the entire Private Real Estate composite at that given time.

MEKETA INVESTMENT GROUP Page 44 of 47

Credit Risk: Refers to the risk that the issuer of a fixed income security may default (i.e., the issuer will be unable to make timely principal and/or interest payments on the security).

Duration: Measure of the sensitivity of the price of a bond to a change in its yield to maturity. Duration summarizes, in a single number, the characteristics that cause bond prices to change in response to a change in interest rates. For example, the price of a bond with a duration of three years will rise by approximately 3% for each 1% decrease in its yield to maturity. Conversely, the price will decrease 3% for each 1% increase in the bond's yield. Price changes for two different bonds can be compared using duration. A bond with a duration of six years will exhibit twice the percentage price change of a bond with a three-year duration. The actual calculation of a bond's duration is somewhat complicated, but the idea behind the calculation is straightforward. The first step is to measure the time interval until receipt for each cash flow (coupon and principal payments) from a bond. The second step is to compute a weighted average of these time intervals. Each time interval is measured by the present value of that cash flow. This weighted average is the duration of the bond measured in years.

Information Ratio: This statistic is a measure of the consistency of a portfolio's performance relative to a benchmark. It is calculated by subtracting the benchmark return from the portfolio return (excess return), and dividing the resulting excess return by the standard deviation (volatility) of this excess return. A positive information ratio indicates outperformance versus the benchmark, and the higher the information ratio, the more consistent the outperformance.

Jensen's Alpha: A measure of the average return of a portfolio or investment in excess of what is predicted by its beta or "market" risk. Portfolio Return- [Risk Free Rate+Beta*(market return-Risk Free Rate)].

Market Capitalization: For a firm, market capitalization is the total market value of outstanding common stock. For a portfolio, market capitalization is the sum of the capitalization of each company weighted by the ratio of holdings in that company to total portfolio holdings; thus it is a weighted-average capitalization. Meketa Investment Group considers the largest 65% of the broad domestic equity market as large capitalization, the next 25% of the market as medium capitalization, and the smallest 10% of stocks as small capitalization.

Market Weighted: Stocks in many indices are weighted based on the total market capitalization of the issue. Thus, the individual returns of higher market-capitalization issues will more heavily influence an index's return than the returns of the smaller market-capitalization issues in the index.

Maturity: The date on which a loan, bond, mortgage, or other debt/security becomes due and is to be paid off.

Prepayment Risk: The risk that prepayments will increase (homeowners will prepay all or part of their mortgage) when mortgage interest rates decline; hence, investors' monies will be returned to them in a lower interest rate environment. Also, the risk that prepayments will slow down when mortgage interest rates rise; hence, investors will not have as much money as previously anticipated in a higher interest rate environment. A prepayment is any payment in excess of the scheduled mortgage payment.

Price-Book Value (P/B) Ratio: The current market price of a stock divided by its book value per share. Meketa Investment Group calculates P/B as the current price divided by Compustat's quarterly common equity. Common equity includes common stock, capital surplus, retained earnings, and treasury stock adjusted for both common and nonredeemable preferred stock. Similar to high P/E stocks, stocks with high P/B's tend to be riskier investments.

MEKETA INVESTMENT GROUP Page 45 of 47

Price-Earnings (P/E) Ratio: A stock's market price divided by its current or estimated future earnings. Lower P/E ratios often characterize stocks in low growth or mature industries, stocks in groups that have fallen out of favor, or stocks of established blue chip companies with long records of stable earnings and regular dividends. Sometimes a company that has good fundamentals may be viewed unfavorably by the market if it is an industry that is temporarily out of favor. Or a business may have experienced financial problems causing investors to be skeptical about is future. Either of these situations would result in lower relative P/E ratios. Some stocks exhibit above-average sales and earnings growth or expectations for above average growth. Consequently, investors are willing to pay more for these companies' earnings, which results in elevated P/E ratios. In other words, investors will pay more for shares of companies whose profits, in their opinion, are expected to increase faster than average. Because future events are in no way assured, high P/E stocks tend to be riskier and more volatile investments. Meketa Investment Group calculates P/E as the current price divided by the I/B/E/S consensus of twelve-month forecast earnings per share.

Quality Rating: The rank assigned a security by such rating services as Fitch, Moody's, and Standard & Poor's. The rating may be determined by such factors as (1) the likelihood of fulfillment of dividend, income, and principal payment of obligations; (2) the nature and provisions of the issue; and (3) the security's relative position in the event of liquidation of the company. Bonds assigned the top four grades (AAA, AA, A, BBB) are considered investment grade because they are eligible bank investments as determined by the controller of the currency.

Sharpe Ratio: A commonly used measure of risk-adjusted return. It is calculated by subtracting the risk free return (usually three-month Treasury bill) from the portfolio return and dividing the resulting excess return by the portfolio's total risk level (standard deviation). The result is a measure of return per unit of total risk taken. The higher the Sharpe ratio, the better the fund's historical risk adjusted performance.

STIF Account: Short-term investment fund at a custodian bank that invests in cash-equivalent instruments. It is generally used to safely invest the excess cash held by portfolio managers.

Standard Deviation: A measure of the total risk of an asset or a portfolio. Standard deviation measures the dispersion of a set of numbers around a central point (e.g., the average return). If the standard deviation is small, the distribution is concentrated within a narrow range of values. For a normal distribution, about two thirds of the observations will fall within one standard deviation of the mean, and 95% of the observations will fall within two standard deviations of the mean.

Style: The description of the type of approach and strategy utilized by an investment manager to manage funds. For example, the style for equities is determined by portfolio characteristics such as price-to-book value, price-to-earnings ratio, and dividend yield. Equity styles include growth, value, and core.

Tracking Error: A divergence between the price behavior of a position or a portfolio and the price behavior of a benchmark, as defined by the difference in standard deviation.

MEKETA INVESTMENT GROUP
Page 46 of 47

Yield to Maturity: The yield, or return, provided by a bond to its maturity date; determined by a mathematical process, usually requiring the use of a "basis book." For example, a 5% bond pays \$5 a year interest on each \$100 par value. To figure its current yield, divide \$5 by \$95—the market price of the bond—and you get 5.26%. Assume that the same bond is due to mature in five years. On the maturity date, the issuer is pledged to pay \$100 for the bond that can be bought now for \$95. In other words, the bond is selling at a discount of 5% below par value. To figure yield to maturity, a simple and approximate method is to divide 5% by the five years to maturity, which equals 1% pro rata yearly. Add that 1% to the 5.26% current yield, and the yield to maturity is roughly 6.26%.

Yield to Worst: The lowest potential yield that can be received on a bond without the issuer actually defaulting. The yield to worst is calculated by making worst-case scenario assumptions on the issue by calculating the returns that would be received if provisions, including prepayment, call, or sinking fund, are used by the issuer.

NCREIF Property Index (NPI): Measures unleveraged investment performance of a very large pool of individual commercial real estate properties acquired in the private market by tax-exempt institutional investors for investment purposes only. The NPI index is capitalization-weighted for a quarterly time series composite total rate of return.

NCREIF Fund Index - Open End Diversified Core Equity (NFI-ODCE): Measures the investment performance of 28 open-end commingled funds pursuing a core investment strategy that reflects funds' leverage and cash positions. The NFI-ODCE index is equal-weighted and is reported gross and net of fees for a quarterly time series composite total rate of return.

Core Fixed Income Manager Search

Background

→ Meketa and the Investment Sub-Committee held a sub-committee meeting earlier this month to discuss MercedCERA's sole core bond active manager, Barrow Hanley. As you may recall, Meketa and the Board have had several discussions regarding a) the goals and structure of the overall fixed income portfolio, b) forward-looking return expectations of the manager over the long-term, and c) Barrow Hanley's ability to effectively and actively manage duration of the portfolio in the short-term given a rising rate environment.

Main discussion points of the meeting centered on:

a) Forward-looking return expectations of the manager: Meketa walked the sub-committee through what they view to be higher conviction managers deemed to be best in class as potential replacements to Barrow Hanley. Three managers were profiled that Meketa believes to be an upgrade. Of those three, **Wellington** stood out for both their **strong security selection** and their **attractive fee offering**.

Action Item: Seek Board approval to invest \$40M (approximately half of current BHMS assets) into the Wellington Core Bond Fund, using \$40M in proceeds from the partial sale of Barrow Hanley.

b) <u>Active duration management</u>: Discussion around the overall structure and goals of the fixed income program. Interest in complimenting a strong core bond manager (such as Wellington), with a fixed income strategy where duration is a central piece of their investment strategy and process. Meketa will present high conviction managers in this space later this month, with the goal of bringing forth a recommendation to the Board in October.

Informational Item only, at this time. An additional sub-committee meeting is scheduled in October.

Core Fixed Income Manager Search

Background (continued)

c) Additional and immediate consideration: The sub-committee felt it prudent to reduce duration exposure via a rebalancing trade. No formal approval is required as Staff and the Executive Director have authority to execute as deemed appropriate per the Investment Policy Statement. Subsequent to the meeting, the following trade was executed:

Sell: \$40M out of the Vanguard Total Bond Index

Purchase: \$40M into the Vanguard Short-Term Treasury Index

Information Item only. Executed and completed.

→ The following document, included in the Appendix, was used for the sub-committee discussion, and provides a summary of the search process and highlights the three managers under consideration.

Appendices

Appendices: Introduction

Introduction

Investment managers are expected to operate within a client's investment guidelines and are given a large degree of latitude to achieve the investment objective.

Manager selection is a nuanced process and requires extensive due diligence. When selecting prospective active managers, Meketa evaluates the following areas:

- \rightarrow Organization
- → Investment Team
- → Investment Philosophy
- → Investment Process
- → Investment Performance
- → Management Fees

MEKETA INVESTMENT GROUP Page 8 of 27

¹ Baird s 95% employee-owned, with the remainder owned by Northwestern Mutual, which is winding down its ownership to employees.

Appendices: Manager Candidates

Baird Advisors

Organization

- → Baird Advisors is the fixed income arm of Robert W. Baird Limited, a majority employee-owned financial services firm based in Milwaukee, WI. Robert W. Baird was founded in 1919 and provides asset management, private equity, investment banking, and private wealth management services. Baird now manages \$116.4 billion in assets under management with \$49.7 billion in the Core Bond strategy.
- → The firm is 95% employee-owned, with the remainder owned by Northwestern Mutual, which is winding down its ownership to employees.

Investment Team

- → Baird Advisor's founding partners are Mary Ellen Stanek, the current Chief Investment Officer, Charlie Groeschell, current Senior Portfolio Manager, and Gary Elfe, who sadly passed away in November 2020.
- → The strategy is supported by six senior portfolio managers, three additional portfolio managers, and four research analysts. Members of the team are generalists, and each of them contributes research. Turnover on the team has also been exceptionally low, with no investment professional turnover in the last five years (except for Mr. Elfe's passing).
- → Baird has also put thought into succession planning, as the founding partners are in their late 50s. Warren Pierson, a 20-year veteran of the strategy, will assume the role of CIO, and Jay Schwister, portfolio manager, will assume Mr. Groeschell's role of senior portfolio manager. No immediate timeline for succession.

Appendices: Manager Candidates

Baird Advisors (continued)

Investment Philosophy and Process

- → The team at Baird Advisors believes that capital markets are very efficient in discounting risk and return over time. Since interest rates are extremely difficult to consistently forecast, they employ a duration neutral, risk-controlled approach.
- → The Core strategy targets 50 to 75 basis points excess return gross of fees with a tracking error target of 75 to 125 basis points.
- → The team sets the duration of each portfolio equal to that of an appropriate benchmark, thus ensuring a high degree of predictability in tracking benchmark returns. They add incremental value through security selection, yield curve positioning, sector allocation, and competitive execution of trades.
- → Portfolio construction follows a two-fold investment process. First, the team seeks to structure the portfolio to achieve the return of the benchmark. This is done through a complete understanding of the benchmark's components and an evaluation of pricing, turnover, and projected changes. Baird does not forecast interest rates, and thus the portfolio managers will control risk by remaining duration neutral at all times.
- → The Baird team then seeks to add excess return through yield curve positioning, sector allocation, security selection, and competitive trade execution. Yield curve positioning is continuously monitored, and the team seeks to optimize yield through the roll down effect. Sector allocation is centered on relative value analysis, yield spread analysis, and underlying risk factors. Security selection emphasizes capital structure, financials, and liquidity. Typically, Baird seeks to pick-up additional yield through off-the-run issues.

Appendices: Manager Candidates

Wellington Trust Company

Organization

- → Wellington Management, headquartered in Boston, MA, traces its history back to the founding of the Wellington Fund in 1928. Wellington Management Group (WMG) is a limited liability partnership, privately held by 177 partners who are all fully active in the business of the firm with no external entities with any ownership interest.
- → Wellington had \$1.2 trillion in assets under management as of June 30, 2022, of which \$53.2 billion are in the Core Bond strategy

Investment Team

- → The Core Bond and Intermediate strategies are run by two partners of the firm, Joe Marvan and Campe Goodman, who are also members of the Broad Markets team of portfolio managers. Sector specialists manage each sector (Governments, MBS, CMBS, investment grade credit, rates, inflation) based on fundamental bottom-up research. The Core Bond portfolio managers work with the Sector Specialist Portfolio Managers and all analysts to construct and monitor the portfolio.
- → There is no CIO. The Broad Markets team decides the broad strategy such as allocating risk to sectors and duration. Broad Markets has four portfolio managers and an Investment Director that make top-down macro decisions based on the economy, central bank policy, and rates. Portfolio managers that run other strategies usually are in agreement with their views, but they do not have to take direction from them and may run independently.

Appendices: Manager Candidates

Wellington Trust Company (continued)

Investment Team (continued)

→ There are 40 credit analysts and the fixed income team leverages the 51 industry equity analysts. They often sit in on company meetings together to get a management team to address both the equity and balance sheet concerns. This large pool of analysts works on various strategies across the firm.

Investment Philosophy and Process

- → The Core Bond strategy is managed in a benchmark-relative style that invests across the major sectors of the domestic, investment grade bond market. The strategy seeks excess returns of 50-75 bps over the Bloomberg US Aggregate Bond index, with expected tracking error of 100-150 bps. The strategy maintains an AA/A credit quality rating and overall duration is typically +/- 1.0 year relative to the index. Historical exposures across high quality fixed income sectors have been; US Treasuries and Agencies 0-50%; Investment grade credit 10-50%, Agency MBS 20-70%; Structured credit 20-40%.
- → Wellington runs a well-diversified portfolio with no one source of alpha overwhelming returns. They only invest in investment grade, US-dollar denominated, securities and do not make allocations to the high yield or non-US dollar denominated sectors.
- → While individual security analysis is the cornerstone to their research effort, the Broad Markets team maintains its own top-down sector relative value analysis, as well as views on interest rates, yield curve shape, and inflation. The Broad Markets team meets formally bi-monthly to discuss and develop top-down strategy that includes an interdisciplinary team of internal analysts, macro strategists, portfolio managers, and traders.

Appendices: Manager Candidates

Income Research & Management

Organization

- → IR&M manages \$87 billion in fixed income assets, mostly in separately managed accounts. The firm manages \$15.1 billion in the Core Bond strategy.
- → As of January 5, 2021, the firm is approximately 90.2% employee owned, held across 64 employees. Two non-employee members of the Sommers family hold the remaining 9.8% of firm ownership. For estate planning purposes, John Sommers (Co-Founder, Chairperson Emeritus, and Board Member), transferred a majority of his shares to his son Jack Sommers (Co-Founder, Executive Chairperson, and Board Member) and his other two sons not involved in the business.
- → The succession plan is to continue selling shares each year at a rate of about 2-3% of the firm but the shares are not coming from the founders they are being issued as new shares in a process where all current shareholders (founders and everyone) get diluted in the process equally.

Investment Team

→ The investment team consists of 41 professionals, of which 14 are portfolio managers. Portfolio managers' involvement in the strategy varies depending on the extent that their sector expertise is utilized within portfolio guidelines. Since portfolio managers are not assigned specific portfolios or mandates, they have buy and sell authority within the bounds of their respective sectors. The team is supported by 18 analysts, who are responsible for credit analysis within their respective sectors.

Appendices: Manager Candidates

Income Research & Management (continued)

Investment Philosophy and Process

- → IR&M follows a team-oriented duration-neutral and key rate neutral approach focused on relative value emphasizing bottom-up security selection to drive sector selection. The team is benchmark aware with low tracking error.
- → Security selection and relative value drive exposures and excess returns. IR&M uses no leverage, no derivatives, and no currency risk.
- → New ideas are sourced from new issues, secondary market activity, management meetings, conferences, or team conversations. Securities are then evaluated on an issue-by-issue basis, placing heavy emphasis on credit fundamentals, structural features, volatility, and liquidity.
- → Analysts layer top-down analysis by going through different testing methodologies, giving special attention to downside risk under extreme scenarios. The team opts to maintain a duration and yield curve neutral stance, while setting overall sector exposure targets. Portfolio managers, who act as sector specialists, are responsible for determining sub-sector exposure that must fall within limit bands.
- → Portfolio managers are ultimately responsible for buy and sell decisions within their respective areas of expertise.

Appendices: Manager Candidates

Barrow Hanley

Organization

- → Barrow, Hanley, Mewhinney & Strauss ("BHMS") is a Dallas-based asset management firm. The firm is 75% owned by Perpetual Limited, a publicly traded Australian financial services company that skews heavily towards retail channels. The 75% ownership stake was previously held by BrightSphere Investment Group plc (formerly Old Mutual), a public firm (NYSE: BSIG) until it was sold to Perpetual in 2020. The remaining 24.9% is owned by portfolio managers and analysts through a limited partnership.
- → BHMS was established in 1979 and now manages roughly \$43 billion in AUM across all strategies. The firm manages approximately \$6.3 billion in fixed income assets, with approximately \$1.8 billion in the High Quality Core Fixed Income strategy.

Investment Team

- → The High Quality Core Fixed Income team is comprised of 6 portfolio managers who also serve as analysts and traders in their respective sectors. There is also one quantitative analyst who is responsible for their Relative Return Model but members of the PM team contribute to its development as well.
- → The Fixed Income teams utilizes the broader resources of Barrow Hanley's equity team. The primary advantage of the integration of these teams noted by BH has been their access to company management.

Appendices: Manager Candidates

Barrow Hanley (continued)

Investment Philosophy and Process

- → BHMS is best described as a "value" manager, investing in a duration-neutral fashion, with individual security valuation and selection as the primary focus. The firm believes the global fixed income markets are fragmented, producing temporary inefficiencies that provide opportunities for active management employing a research-driven selection process.
- → The investment process for their Core fixed income strategies begin with a top-down analysis or screening of the investable universe utilizing their Relative Return Model. The Relative Return Model is based on mean reversion of spread metrics of the various sectors in the investable universe compared to US treasuries.
- → The team strictly trades in all cash bonds when constructing their portfolio and each sector is analyzed by the dedicated PM in that sector who also trades within that sector. There is no formal investment committee which results in ad hoc and fluid process for names being added to the portfolio.
- → There are daily calls with the portfolio management team to discuss relative value across sectors and their trade ideas within their sectors. For example, based on the relative value model there may be opportunities to swap out certain corporate credit positions in favor of ABS.
- → The bottom-up fundamental research performed by each of the six members of the team is split up by sectors and their research is generally stored in Bloomberg notes that are accessible to the rest of the team.
- → Given the focus on higher quality in corporate credit and ABS positioning, their cash bond trading in corporates tends to be shorter duration so their treasury positioning will tend to fall on the longer end of the curve to remain duration neutral versus the benchmark on the total portfolio level.

Information Ratio	50	35	6	70	67	28	10	8	3	27	31	40

- → IR&M's information ratio ranking and consistent top quartile performance stand out among peers.
- → Barrow Hanley's excess returns rank among the 3rd and 4th quartile among peers. The strategy closely tracks the benchmark with a tracking error that is one of the lowest among peers/ranks in the top decile.

MEKETA INVESTMENT GROUP
Page 22 of 27

¹ All characteristics are ranked high to low. A 1st percentile ranking corresponds to the highest absolute number in the peer group with the exception of tracking error that ranks values from low to high.

² Based on gross of fees returns. Excess Return rankings are based on excess returns of each manager compared to the Bloomberg Barclays US Aggregate.

Appendices: Historical Performance, Portfolio Characteristics, and Management Fees

Core Performance and Positioning Commentary

Baird

→ Baird's Core strategy has a strategic underweight to treasuries and overweight to corporate credit. The strategy also maintains a duration neutral stance to control for interest rate risk. The strategy has done well in outperforming the benchmark while managing risk where they have captured 116% of the upside and protected on the downside with 99% capture. Their risk adjusted returns as measured by information ratio ranks in the top decile among peers over the long term.

Wellington

→ The strategy has the largest overweight to structured credit relative to the benchmark and utilizes treasury futures to remain relatively duration neutral to the benchmark. Wellington's Core strategy has performed well against the benchmark on an absolute and risk adjusted basis. The strategy has historically captured 111% of the upside and protected on the downside with 98% capture. The strategy has been challenged in recent periods but long term performance is still very competitive among peers.

IR&M

→ The strategy has an overweight to structured credit through CMBS and ABS relative to the benchmark and maintains a duration neutral position. IR&M's Core strategy has done the best at protecting on the downside among this group with a downside capture of 93% over the 10-year trailing period. Their risk adjusted returns as measured by information ratio ranks in the top decile among peers.

Barrow Hanley

→ Barrow Hanley's High Quality Core strategy has an underweight to treasuries and overweight to corporate and structured credit. The strategy's historical returns closely resemble the benchmark with a correlation in the top decile of the peer universe and a tracking error in the lowest decile. Given the high correlation to the benchmark, their returns rank in the bottom quartile over the 10-year trailing period.

Appendices: Historical Performance, Portfolio Characteristics, and Management Fees

Fees and Terms

	Fee Schedule	Vehicle Type	Effective Fee on \$80M	Minimum Account Size	Liquidity
Baird	0.30% on all assets	Mutual Fund	0.30%	\$10,000	Daily
Wellington	0.134% on all assets	Commingled Fund	0.134%	\$1M	Daily
IR&M	SMA: 0.25% on first \$100M 022% on next \$100M 0.20% on next \$100M 0.15% thereafter Private Fund: 0.22% on all assets	Separate Account Private Fund	0.25% 0.25%	\$50M ¹ \$5M	Daily Daily
Barrow Hanley	0.30% on first \$50M 0.20% on next \$100M 0.15% thereafter	Separate Account	0.26%	N/A	Daily

- → The median fee for a \$80 million commingled fund mandate is 26.1 basis points and the median fee for a \$80 million separate account mandate is 26.3 basis points. The median fee for an \$80 million Core mutual fund mandate in the eVestment Core Fixed Income universe is 43 basis points.
- → Meketa's discounted fees on Wellington's commingled fund ranks in the top 4% of the universe. Meketa was able to negotiate a 52% discounted fee in Wellington's commingled vehicles (CIF II and CTF) at 12 basis points plus operating expenses which run around 1.4 basis points currently (capped at 3 basis points).
- → Baird's Core Mutual fund fees rank in the top decile. IR&M's SMA fee ranks in the second quartile.
 - Barrow Hanley's SMA fees ranks in the 50th percentile.

MEKETA INVESTMENT GROUP
Page 24 of 27

¹ Minimum investment for IR&M SMAs have been waived for this mandate assuming both mandates are allocated to the manager.

Appendix

MEKETA INVESTMENT GROUP Page 25 of 27

Information Ratio: This statistic is a measure of the consistency of a portfolio's performance relative to a benchmark. It is calculated by subtracting the benchmark return from the portfolio return (excess return), and dividing the resulting excess return by the standard deviation (volatility) of this excess return. A positive information ratio indicates outperformance versus the benchmark, and the higher the information ratio, the more consistent the outperformance.

Sharpe Ratio: A commonly used measure of risk-adjusted return. It is calculated by subtracting the risk free return (usually three-month Treasury bill) from the portfolio return and dividing the resulting excess return by the portfolio's total risk level (standard deviation). The result is a measure of return per unit of total risk taken. The higher the Sharpe ratio, the better the fund's historical risk adjusted performance.

Standard Deviation: A measure of the total risk of an asset or a portfolio. Standard deviation measures the dispersion of a set of numbers around a central point (e.g., the average return). If the standard deviation is small, the distribution is concentrated within a narrow range of values. For a normal distribution, about two thirds of the observations will fall within one standard deviation of the mean, and 95% of the observations will fall within two standard deviations of the mean.

Tracking Error: This statistic measures the standard deviation of excess returns relative to a benchmark. Tracking error is calculated by multiplying the standard deviation of the monthly excess returns of a portfolio relative to a benchmark by the square root of twelve in order to annualize. The higher the tracking error, the greater the volatility of excess returns relative to a benchmark.

Upside/Downside Market Capture: A measure of the manager's performance in up(down) markets relative to the market itself. For UMC, a value of 110 suggests the manager performs ten percent better than the market when the market is up during the selected time period. For DMC, A value of 90 suggests the manager's loss is only nine tenths of the market's loss during the selected time period. The Upside/Downside Capture Ratio is calculated by dividing the return of the manager during the up market periods by the return of the market for the same period. Generally, the higher the UMC Ratio and lower the DMC, the better (If the manager's UMC Ratio is negative, it means that during that specific time period, the manager's return for that period was actually positive)

Up/Down Period Percent: Measures the number of periods that a fund outperformed the benchmark when the benchmark return was greater(less) or equal to than 0%, divided by the number of periods that the benchmark return was greater(less) than or equal to 0%. The larger the ratio, the better, indicating the percentage of periods that the product outperformed the benchmark in an up(down) market.

Alternative Investment Performance

Merced County Employees' Retirement Association

Strictly Confidential. Not for Distribution.

MercedCERA Private Equity Capital Budget & Implementation Plan

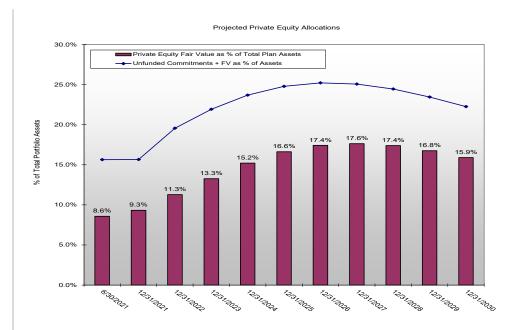

15% fund level target; an increase from 9% in 2018

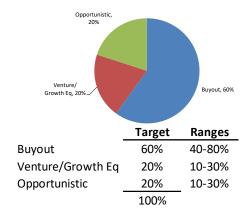

- Increase annual capital budget target to \$55 mm from \$40 mm
 - Range of \$40-\$70 million
- Target 5-10 investments, range of \$5-\$15 million per inv; average size of \$8 million per
- Forecasted to reach the targeted level in 3 years
- Targets for strategy exposures remain the same
- Update capital budgets on an annual basis

Performance comparisons:

- Long term investment objective: Earn a return premium over public equity (Russell 3000 + 3%)
- Recommended primary asset class benchmark: Cambridge Associates Global Private Equity & VC Index
- Recommended fund benchmarks: Each fund will be compared to the Cambridge Associates strategy universe for the respective vintage years and each vintage year will be compared to Cambridge Associates Global Private Equity & VC Index

Target Strategy Diversification

Note: MCERA's existing private equity portfolio was modeled using vintage year drawdown/return of capital assumptions patterned after historical category averages. Total fund growth of 5.5%.

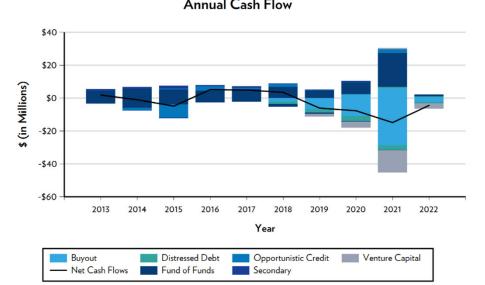

MercedCERA Private Equity Investment Structure & Portfolio Assessment

Investment structure (15% fund target; 12% invested as of May 2022):

- Current portfolio is barbelled with half of commitments in 2007 & earlier FoFs and half in 2011 & later FoFs
 - Overall portfolio has not met performance expectations; VY 2014 & earlier funds are mature with the funds in VY
 2017-2022 in their investment period
 - There were annual gains of \$30 million, including \$1 million in 1Q; contributions exceed distributions by \$18 million
 as the newer portfolios are being built
 - Portfolio is diversified by strategy but overall it is in a negative cash flow situation

MercedCERA Real Estate Capital Budget & Implementation Plan

8% fund level target; same as prior target

- Increase annual capital budget to \$20 mm from \$15 mm
 - Range of \$10-\$30 million
- Target 2-4 investments, range of \$5-\$10 million per inv
 - Average investment size of \$8 million
 - If an average of 2-4 GP partnership commitments per year,
 expect a total of 8-16 GP relationships over a 4 year fund raising cycle
- Continue using REITS as a substitute until funding private real estate investments is needed; core RE target is 25% of RE portfolio

Performance comparisons:

- Long term investment objective: Earn a return premium over inflation (CPI-U + 5%)
- Recommended primary asset class benchmark: NCREIF NFI-ODCE; revisit over time as the structure of the portfolio changes
- Recommended fund benchmarks: Cambridge Associates strategy universe for the respective vintage years and each vintage year will be compared to Cambridge Associates Global Real Estate Index

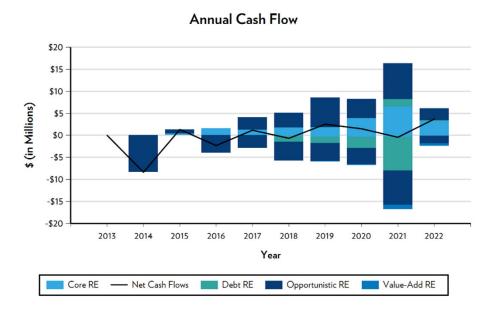

MercedCERA Real Estate Investment Structure & Portfolio Assessment

Real estate investment structure (8% target, 8.1% actual as of May 2022)

- MCERA invested in 1999 in a private core real estate fund; direct program began in 2014
- Distributions exceed contributions by \$4 million over the past year; RE activity has increased and the valuation improved by \$14 million over the past year, including \$4 million in the past quarter

MercedCERA Real Estate Performance – as of Mar 31, 2022

Real Estate Portfolio

- MCERA began investing in the UBS Trumbull core real estate fund in 1999 and this represents the bulk of the real estate portfolio
 - Opportunistic funds began being added in 2014 and they are in the being developed
- Overall performance has met objectives, driven by the core RE fund; opportunistic fund performance is not meaningful

Note: The benchmark at the total portfolio level is NCREIF NFI-ODCE. Private real estate benchmark at the fund level is the Cambridge Value Add or Opportunistic RE Indices while the Cambridge Global Real Estate Index at the vintage year level.

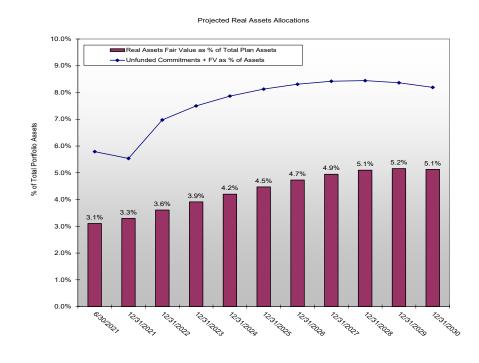

MercedCERA Real Asset Capital Budget & Implementation Plan

5% fund level target; a decrease from the prior 6% target in 2018

- Increase annual capital budget target from \$15 to \$18 million
 - Range of \$10-\$25 million
- Target 2-4 investments, range of \$5-\$10 million per inv
 - Average investment size of \$8 million
 - If an average of 2-4 GP partnership commitments per year,
 expect a total of 8-16 GP relationships over a 4 year fund raising cycle
- Portfolio targeted to be equally split between infrastructure and energy/natural resource funds

Performance comparisons:

- Long term investment objective: Earn a return premium over inflation (CPI-U + 5%)
- Recommended primary asset class benchmark: 50/50 Cambridge Global Infrastructure/Cambridge Energy Upstream & Royalties and Private Energy Index
- Recommended fund benchmarks: Each fund will be compared to the Cambridge Associates strategy universe for the respective vintage years and each vintage year will be compared to the 50/50 index

Note: MCERA's existing real asset portfolio was modeled using vintage year drawdown/return of capital assumptions patterned after historical category averages. Total fund growth rate of 5.5%.

MercedCERA Real Assets Investment Structure & Portfolio Assessment

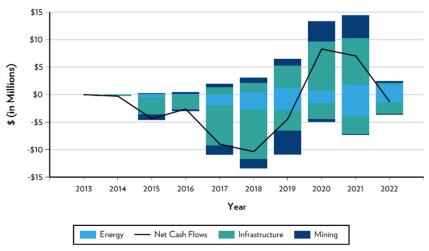

Real assets investment structure (5% target, 5.3% actual as of May 2022)

- Program is designed to be equally divided between private infrastructure and natural resource funds along with a public real asset component
- Private fund commitments began in 2014 to infrastructure and 2015 to natural resources
- The majority of the portfolio is in development
 - Distributions exceed contributions by \$6 mm as the older infrastructure funds continue to return capital

MercedCERA Direct Lending Capital Budget & Implementation Plan

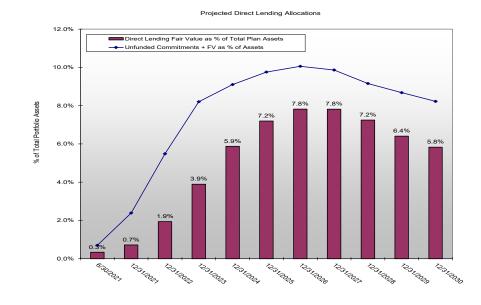

5% fund level target approved in Oct 2021

- Target a \$40 million capital budget for 2022
 - Range of \$30-\$50 million
- Target 2-4 investments, range of \$10-\$25 million per inv
 - Average investment size of \$20 million

Moved Silver Point Specialty Credit II (VY 2019) from PE to DL

Performance comparisons:

Recommended primary asset class benchmark: S&P LSTA + 2%

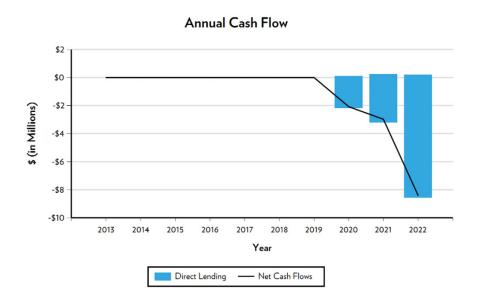

MercedCERA Direct Lending Investment Structure & Portfolio Assessment

Direct Lending investment structure (5% target, 1.9% actual as of May 2022)

- Program was approved with the asset allocation in Oct 2021
- Silver Point was moved over from the PE portfolio and new commitments began at year end 2021
- The overall portfolio is immature with the funds in the early stage of development
 - Contributions exceed distributions by \$8.4 mm as the program is being built out

Important Notice

This presentation was prepared exclusively for information and discussion purposes, and is not meant to be, nor shall it be construed as, an attempt to define all information that may be material to you. All information including opinions or facts expressed herein are current as of the date appearing in this presentation and is subject to change without notice. All information has been obtained from sources believed to be reliable. No representation, warranty, or undertaking, express or implied, is given as to the accuracy or completeness of the information or opinions contained in this presentation. Past performance does not guarantee future performance.

This presentation may include sample or pro forma performance. Such information is presented for illustrative purposes only and is based on various assumptions, not all of which are described herein. Such assumptions, data, or projections may have a material impact on the returns shown.

References to market or composite indices (such as the S&P 500), benchmarks or other measures of relative market performance over a specified period of time (each, an "index") are provided for information only. Reference to an index does not imply that a portfolio will achieve returns, volatility or other results similar to the index. The composition of an index may not reflect the manner in which a portfolio is constructed in relation to expected or achieved returns, portfolio guidelines, restrictions, sectors, correlations, concentrations, volatility or tracking error targets, all of which are subject to change over time.

The S&P/LSTA U.S. Leveraged Loan Index is a market value weighted index tracking institutional leveraged loans in the United States based upon market weightings, spreads and interest payment, including Term Loan A, Term Loan B and Second Lien tranches.

The Bloomberg Barclays U.S. Corporate High Yield Index (Bloomberg Barclays High Yield) measures the USD-denominated, high yield, fixed-rate corporate bond market. Securities are classified as high yield if the middle rating of Moody's, Fitch and S&P is Ba1/BB+/BB+ or below. Bonds from issuers with an emerging markets country of risk, based on the indices' EM country definition are excluded.

The Bloomberg Barclays U.S. Aggregate Index represents securities that are SEC-registered, taxable, and dollar denominated. The index covers the U.S. investment grade fixed rate bond market, with index components for government and corporate securities, mortgage pass-through securities, and asset-backed securities.

The NCREIF Property Index is a quarterly time series composite total rate of return measure of investment performance of a very large pool of individual commercial real estate properties acquired in the private market for investment purposes only. All properties in the index have been acquired, at least in part, on behalf of tax-exempt institutional investors.

The Cambridge Private Equity Index is based on data compiled from global institutional-quality buyout, growth equity, private equity energy, venture capital and mezzanine funds, including fully liquidated partnerships, formed between 1986 and 2016.

The Russell 3000 Index is a capitalization-weighted stock market index that seeks to track the entire U.S stock market. It measures the performance of the 3,000 largest publicly held companies incorporated in the United States based on market capitalization.

Alternative Investment Performance

Merced County Employees' Retirement Association

Strictly Confidential. Not for Distribution.

California Assembly Bill 2833 was enacted in 2016 and became effective January 1, 2017 as California Government Code Section 7514.7 (the "Code")

• The Code requires California public pension plans ("California Plans") to obtain and publicly disclose certain fee and expense data and information on an annual basis in a public meeting

The law applies to any private fund that is an alternative investment vehicle whose contract with a California Plan was entered into on or after January 1, 2017, or for any existing contract as of December 31, 2016 for which an additional capital commitment is made on or after January 1, 2017

 California Plans are required to use "reasonable efforts" to obtain the required information for contracts entered into prior to January 1, 2017

The intent of the legislation is to increase transparency of the fees public investors are paying

Code Section 7514.7 Disclosure Requirements

- 1. The fees and expenses that the California Plan pays directly to the alternative investment vehicle, the fund manager, or related parties.
- 2. The California Plan's pro rata share of fees and expenses not included in paragraph (1) that are paid from the alternative investment vehicle to the fund manager or related parties.
- The California Plan's pro rata share of carried interest distributed to the fund manager or related parties.
- 4. The California Plan's pro rata share of aggregate fees and expenses paid by all of the portfolio companies held within the alternative investment vehicle to the fund manager or related parties.
- 5. Any additional information described in subdivision (b) of Section 6254.26 of the Code.

The Code also requires that the California Plan's disclosure report include the since inception gross and net rate of return of each alternative investment vehicle.

Code Section 6254.26 Disclosure Requirements

- 1. The name, address, and vintage year of each alternative investment vehicle.
- The dollar amount of the commitment made to each alternative investment vehicle by the California Plan since inception.
- 3. The dollar amount of cash contributions made by the California Plan to each alternative investment vehicle since inception.
- 4. The dollar amount, on a fiscal year end basis, of cash distributions received by the California Plan from each alternative investment vehicle.
- 5. The dollar amount, on a fiscal year end basis, of cash distributions received by the California Plan plus remaining value of partnership assets attributable to the California Plan's investment in each alternative investment vehicle.
- 6. The net internal rate of return of each alternative investment vehicle since inception.
- 7. The investment multiple of each alternative investment vehicle since inception
- 8. The dollar amount of the total management fees and costs paid on an annual fiscal year-end basis, by the California Plan to each alternative investment vehicle.
- 9. The dollar amount of cash profit received by the California Plan from each alternative investment vehicle on a fiscal year-end basis.

Data Presentation

Presentation of results broken out by asset class, shown separately for the Code (7514.7) and Section 6254.26

- Data provided for the Code shown for calendar year 2020
- Data provided for 6254.26 shown since inception

The reporting was provided to MCERA and Cliffwater from each fund manager

Neither MCERA nor Cliffwater have conducted an independent verification or audit of the information

Reporting the data as of December 31, 2021, to meet the reporting requirements

- This follows the prior annual disclosure reporting as of December 31, 2020
- May consider converting the reporting period from calendar year end to fiscal year end

APPENDIX - FEE & EXPENSE DATA

STRICTLY CONFIDENTIAL. NOT FOR DISTRIBUTION.

All information has been obtained from sources believed to be reliable. No representation, warranty, or undertaking, express or implied, is given as to the accuracy or completeness of the information or opinions contained in this presentation. Past performance does not quarantee future performance.

All information including opinions or facts expressed herein are current as of the date appearing in this presentation and is subject to change without notice. All information has been obtained from sources believed to be reliable. No representation, warranty, or undertaking, express or implied, is given as to the accuracy or completeness of the information or opinions contained in this presentation.

The information herein may include inaccuracies or typographical errors. Due to various factors, including the inherent possibility of human or mechanical error, the accuracy, completeness, timeliness and correct sequencing of such information and the results obtained from its use are not guaranteed by Cliffwater. Cliffwater shall not be responsible for investment decisions, damages, or other losses resulting from the use of the information herein.

References to market or composite indices (such as the S&P 500), benchmarks or other measures of relative market performance over a specified period of time (each, an "index") are provided for information only. Reference to an index does not imply that a portfolio will achieve returns, volatility or other results similar to the index. The composition of an index may not reflect the manner in which a portfolio is constructed in relation to expected or achieved returns, portfolio quidelines, restrictions, sectors, correlations, volatility or tracking error targets, all of which are subject to change over time.

The S&P/LSTA U.S. Leveraged Loan Index is a market value weighted index tracking institutional leveraged loans in the United States based upon market weightings, spreads and interest payment, including Term Loan A. Term Loan B and Second Lien transhes.

The Bloomberg Barclays U.S. Corporate High Yield Index (Bloomberg Barclays High Yield) measures the USD-denominated, high yield, fixed-rate corporate bond market. Securities are classified as high yield if the middle rating of Moody's, Fitch and S&P is Ba1/BB+/BB+ or below. Bonds from issuers with an emerging markets country of risk, based on the indices' EM country definition are excluded.

The Bloomberg Barclays U.S. Aggregate Index represents securities that are SEC-registered, taxable, and dollar denominated. The index covers the U.S. investment grade fixed rate bond market, with index components for government and corporate securities, mortgage pass-through securities, and asset-backed securities.

The NCREIF Property Index is a quarterly time series composite total rate of return measure of investment performance of a very large pool of individual commercial real estate properties acquired in the private market for investment purposes only. All properties in the index have been acquired, at least in part, on behalf of tax-exempt institutional investors.

The Cambridge Private Equity Index is based on data compiled from global institutional-quality buyout, growth equity, private equity energy, venture capital and mezzanine funds, including fully liquidated partnerships, formed between 1986 and 2016.

The Russell 3000 Index is a capitalization-weighted stock market index that seeks to track the entire U.S stock market. It measures the performance of the 3,000 largest publicly held companies incorporated in the United States based on market capitalization.
